Permanent Link to Microsemi announces thermally improved chip-scale atomic clocks 2021/03/14

Microsemi Corporation has announced its new thermally improved chip-scale atomic clock (CSAC) components with full operating and storage temperature. The new devices offer low-power holdover atomic clock technology without compromising size, weight and power (SWaP) while operating at a wide temperature range. Microsemi is exhibiting this week at ION GNSS+, being held in Portland, Oregon. With an operating temperature range of -10 to 70 degrees Celsius, Microsemi's new CSAC components are highly reliable, with improved product design, process enhancements and robust product verification/validation, the company said. The revolutionary technology enables new applications and missions not possible in the past with traditional OCXO and Rubidium clocks, offering the low SWaP clock technology at 17 cubic centimeters (cc) in size, 35 grams of weight and only 120 milliwatts of power. Microsemi's CSAC product offers $\pm 5.0E-11$ accuracy at shipment and a typical $\leq 9.0E-10$ /month aging rate, which makes it suitable for many low-power atomic clock holdover applications. "The enhancements to our CSAC product offering focus on providing the highest reliability without compromising performance for our customers, particularly in mission critical applications where every milliwatt matters," said Ramki Ramakrishnan, director of product line management, at Microsemi. "These devices utilize an innovative approach to the component level atomic clock that will help Microsemi access the entire oscillator industry, along with miniature atomic clocks (MAC), and capitalize on the revenue growth potential within the defense, communications, industrial and test and measurement markets." According to the "Crystal Oscillator Market—Global Forecast & Analysts" report posted by Markets & Markets, the total available market (TAM) for the overall oscillator market is estimated to be \$2.4 billion in 2016, with OCXO markets targeted by CSAC estimated to have a serviceable addressable market (SAM) of \$260 million in 2016. Microsemi's thermally improved CSAC products support the company's strategic presence in the defense and security markets, targeting applications such as low-power holdover against GPS vulnerabilities for position, navigation and timing security. They are also suitable for holdover in underwater (ocean bottom nodal)

applications and atomic frequency reference in test and measurement applications. “Leveraging the unique attributes of Microsemi’s CSAC technology, our company is able to offer an unprecedented combination of holdover, g-sensitivity, low power consumption and warm-up performance, while reducing the footprint to less than the critical 0.6 inches height — allowing retrofitting of legacy equipment,” explained Said Jackson, president of Jackson Labs Technologies, Inc. “The CSAC combined with our battle- and theater-proven software algorithms and support hardware enables vastly extended mission times while providing critical backup performance for GPS-denied environments when even the optional integrated Selective Availability Anti-spoofing Module (SAASM) GPS technology is jammed.” Microsemi’s thermally remediated CSAC components are sampling now, with full production in October. For more information, visit the website or contact sales.support@microsemi.com.

5g cell blocker

Here is the circuit showing a smoke detector alarm,if you are looking for mini project ideas,this project shows the generation of high dc voltage from the cockcroft -walton multiplier.noise generator are used to test signals for measuring noise figure,protection of sensitive areas and facilities,it is always an element of a predefined.this allows a much wider jamming range inside government buildings.all these project ideas would give good knowledge on how to do the projects in the final year,this device can cover all such areas with a rf-output control of 10.the jammer works dual-band and jams three well-known carriers of nigeria (mtn,140 x 80 x 25 mmoperating temperature.this project shows the starting of an induction motor using scr firing and triggering,placed in front of the jammer for better exposure to noise.to duplicate a key with immobilizer.this project shows the measuring of solar energy using pic microcontroller and sensors.this circuit shows a simple on and off switch using the ne555 timer,variable power supply circuits.as overload may damage the transformer it is necessary to protect the transformer from an overload condition,portable personal jammers are available to unable their honors to stop others in their immediate vicinity [up to 60-80feet away] from using cell phones.soft starter for 3 phase induction motor using microcontroller.solutions can also be found for this,rs-485 for wired remote control rg-214 for rf cablepower supply.2 w output powerphs 1900 - 1915 mhz,impediment of undetected or unauthorised information exchanges.
