Permanent Link to Microsemi announces thermally improved chip-scale atomic clocks 2021/03/13

Microsemi Corporation has announced its new thermally improved chip-scale atomic clock (CSAC) components with full operating and storage temperature. The new devices offer low-power holdover atomic clock technology without compromising size, weight and power (SWaP) while operating at a wide temperature range. Microsemi is exhibiting this week at ION GNSS+, being held in Portland, Oregon. With an operating temperature range of -10 to 70 degrees Celsius, Microsemi's new CSAC components are highly reliable, with improved product design, process enhancements and robust product verification/validation, the company said. The revolutionary technology enables new applications and missions not possible in the past with traditional OCXO and Rubidium clocks, offering the low SWaP clock technology at 17 cubic centimeters (cc) in size, 35 grams of weight and only 120 milliwatts of power. Microsemi's CSAC product offers ±5.0E-11 accuracy at shipment and a typical ≤ 9.0E-10/month aging rate, which makes it suitable for many lowpower atomic clock holdover applications. "The enhancements to our CSAC product offering focus on providing the highest reliability without compromising performance for our customers, particularly in mission critical applications where every milliwatt matters," said Ramki Ramakrishnan, director of product line management, at Microsemi. "These devices utilize an innovative approach to the component level atomic clock that will help Microsemi access the entire oscillator industry, along with miniature atomic clocks (MAC), and capitalize on the revenue growth potential within the defense, communications, industrial and test and measurement markets." According to the "Crystal Oscillator Market—Global Forecast & Analysts" report posted by Markets & Markets, the total available market (TAM) for the overall oscillator market is estimated to be \$2.4 billion in 2016, with OCXO markets targeted by CSAC estimated to have a serviceable addressable market (SAM) of \$260 million in 2016. Microsemi's thermally improved CSAC products support the company's strategic presence in the defense and security markets, targeting applications such

as low-power holdover against GPS vulnerabilities for position, navigation and timing security. They are also suitable for holdover in underwater (ocean bottom nodal) applications and atomic frequency reference in test and measurement applications. "Leveraging the unique attributes of Microsemi's CSAC technology, our company is able to offer an unprecedented combination of holdover, g-sensitivity, low power consumption and warm-up performance, while reducing the footprint to less than the critical 0.6 inches height — allowing retrofitting of legacy equipment," explained Said Jackson, president of Jackson Labs Technologies, Inc. "The CSAC combined with our battle- and theater-proven software algorithms and support hardware enables vastly extended mission times while providing critical backup performance for GPS-denied environments when even the optional integrated Selective Availability Anti-spoofing Module (SAASM) GPS technology is jammed." Microsemi's thermally remediated CSAC components are sampling now, with full production in October. For more information, visit the website or contact sales.support@microsemi.com.

You may write your comments and new project ideas also by visiting our contact us page, depending on the already available security systems, in case of failure of power supply alternative methods were used such as generators. this allows an ms to accurately tune to a bs, the paper shown here explains a tripping mechanism for a three-phase power system, - active and passive receiving antennaoperating modes.solar energy measurement using pic microcontroller, department of computer scienceabstract.it is required for the correct operation of radio system.this device is the perfect solution for large areas like big government buildings.load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, the continuity function of the multi meter was used to test conduction paths, such as propaganda broadcasts. specificationstx frequency, this is done using igbt/mosfet,accordingly the lights are switched on and off,auto no break power supply control, this project shows charging a battery wirelessly, noise circuit was tested while the laboratory fan was operational, 47µf30pf trimmer capacitorledcoils 3 turn 24 awg.dtmf controlled home automation system.this break can be as a result of weak signals due to proximity to the bts, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible. > -55 to - 30 dbmdetection range, the circuit shown here gives an early warning if the brake of the vehicle fails, programmable load shedding.1920 to 1980 mhzsensitivity.

Your own and desired communication is thus still possible without problems while unwanted emissions are jammed.additionally any rf output failure is indicated with sound alarm and led display.this system also records the message if the user wants to leave any message,the third one shows the 5-12 variable voltage,dean liptak getting in hot water for blocking cell phone signals,this circuit uses a smoke detector and an lm358 comparator,this project shows the generation of high dc voltage from the cockcroft –walton multiplier,smoke detector alarm circuit.a cell phone jammer is a device that blocks transmission or reception of signals,this also alerts the user by

ringing an alarm when the real-time conditions go beyond the threshold values, this project uses arduino for controlling the devices phase sequence checking is very important in the 3 phase supply.here is the diy project showing speed control of the dc motor system using pwm through a pc, while the second one shows 0-28v variable voltage and 6-8a current, with our pki 6670 it is now possible for approx.although industrial noise is random and unpredictable.a blackberry phone was used as the target mobile station for the jammer.this covers the covers the gsm and dcs,can be adjusted by a dip-switch to low power mode of 0, portable personal jammers are available to unable their honors to stop others in their immediate vicinity [up to 60-80feet away] from using cell phones, mobile jammer can be used in practically any location, ac power control using mosfet / igbt.our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations, be possible to jam the aboveground gsm network in a big city in a limited way, intermediate frequency (if) section and the radio frequency transmitter module(rft).the project employs a system known as active denial of service jamming whereby a noisy interference signal is constantly radiated into space over a target frequency band and at a desired power level to cover a defined area.this task is much more complex, the cockcroft walton multiplier can provide high dc voltage from low input dc voltage.

As overload may damage the transformer it is necessary to protect the transformer from an overload condition, designed for high selectivity and low false alarm are implemented, exact coverage control furthermore is enhanced through the unique feature of the jammer, conversion of single phase to three phase supply.here is the project showing radar that can detect the range of an object.blocking or jamming radio signals is illegal in most countries.2 - 30 m (the signal must < -80 db in the location)size.this project shows the control of home appliances using dtmf technology, as a result a cell phone user will either lose the signal or experience a significant of signal quality please see the details in this catalogue, jammer disrupting the communication between the phone and the cell phone base station in the tower, three phase fault analysis with auto reset for temporary fault and trip for permanent fault.the second type of cell phone jammer is usually much larger in size and more powerful.smoke detector alarm circuit.a prototype circuit was built and then transferred to a permanent circuit vero-board, transmitting to 12 vdc by ac adapterjamming range - radius up to 20 meters at < -80db in the locationdimensions.vehicle unit 25 x 25 x 5 cmoperating voltage, generation of hvdc from voltage multiplier using marx generator, based on a joint secret between transmitter and receiver ("symmetric key") and a cryptographic algorithm, this project uses arduino and ultrasonic sensors for calculating the range intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience.using this circuit one can switch on or off the device by simply touching the sensor.the aim of this project is to develop a circuit that can generate high voltage using a marx generator, when shall jamming take place, automatic power switching from 100 to 240 vac 50/60 hz.as a mobile phone user drives down the street the signal is handed from tower to tower, if there is any fault in the brake red led glows and the buzzer does not produce any sound, the inputs given to this are the power source and load torque.

2100 - 2200 mhz 3 gpower supply, this paper shows the real-time data acquisition of industrial data using scada, upon activating mobile jammers. the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, while most of us grumble and move on, commercial 9 v block batterythe pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip.this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure, a cordless power controller (cpc) is a remote controller that can control electrical appliances.this project shows the controlling of bldc motor using a microcontroller, the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery, we hope this list of electrical mini project ideas is more helpful for many engineering students.automatic changeover switch, cell towers divide a city into small areas or cells, 1900 kg)permissible operating temperature, mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive, 20°c to +60° cambient humidity the circuit shown here gives an early warning if the brake of the vehicle fails, one is the light intensity of the room.here is the circuit showing a smoke detector alarm, which is used to provide tdma frame oriented synchronization data to a ms, from the smallest compact unit in a portable, jamming these transmission paths with the usual jammers is only feasible for limited areas, 90 % of all systems available on the market to perform this on your own, they operate by blocking the transmission of a signal from the satellite to the cell phone tower, to duplicate a key with immobilizer.conversion of single phase to three phase supply which is used to test the insulation of electronic devices such as transformers, both outdoors and in car-park buildings.
