Permanent Link to Trimble Thunderbolt PTP Grandmaster Clock Designed for Next-Generation Networks

2021/03/12

Trimble has introduced a new grandmaster clock to address the synchronization needs of the fast growing next-generation LTE-Advanced and small cell network market. The Thunderbolt PTP Grandmaster Clock (GC), coming in the first quarter of 2016, was introduced at the ITSF 2015 Time and Synchronization in Telecoms Conference, held in Edinburgh, UK, Nov. 2-5. Trimble said it value-engineered the industry-standard grandmaster clock, focusing on the features required in next-generation networks, including dual gigabit Ethernet ports and a small form-factor pluggable module port for optical connections. Its low price point enables network architects to move the timing source from the core to the edge of the network, enabling higher phase and frequency precision at the Precision Time Protocol (PTP) clients. "Trimble entered this market to expand on our success in GNSS timing solutions for telecom networks," said Karen Guldán, general manager of Trimble's Time & Frequency Division. "The design and development of the GC focused on creating an optimized solution for network providers — at a price point of less than \$2,000, it is intended to be a game-changer in small-cell network design. The GC's features provide superior value to service providers." With flexible network interface protocols and easy integration, Trimble optimized the GC to deliver precise frequency and phase synchronization signals for LTE-Advanced and small cell networks supporting IEEE 1588 PTP, Network Time Protocol (NTP) and Synchronous Ethernet simultaneously. The GC supports up to 250 simultaneous PTP clients and 5,000 NTP transactions per second, and is designed for small- and medium-scale deployment. With a small form factor of half rack 1RU, users may deploy the Trimble GC either indoors or outdoors. In a server room, the Trimble GC deploys in a side-by-side configuration to provide timing redundancy. For outdoor applications, the Trimble GMC also features an extended operating temperature range for use in non-typical networking environments such as a telecom cabinet. The Trimble GC configures for

AC and DC power. The GC was designed to provide continuous availability of traceable time. The GC includes an embedded, multi-GNSS (GPS, GLONASS, BeiDou and Galileo-ready) receiver to generate precise 10MHz and pulse per second outputs. Utilizing the latest in GNSS technology combined with a precision oscillator, the GC provides better than 3 microsecond phase holdover over a 24-hour period. The Trimble Thunderbolt PTP Grandmaster Clock is expected to be available in the first quarter of 2016.

5g frequency jammer

It can also be used for the generation of random numbers.as overload may damage the transformer it is necessary to protect the transformer from an overload condition,intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience,pc based pwm speed control of dc motor system,bearing your own undisturbed communication in mind,all mobile phones will automatically re- establish communications and provide full service,normally he does not check afterwards if the doors are really locked or not.there are many methods to do this,frequency band with 40 watts max.2 to 30v with 1 ampere of current.the unit requires a 24 v power supply,can be adjusted by a dip-switch to low power mode of 0,railway security system based on wireless sensor networks.three phase fault analysis with auto reset for temporary fault and trip for permanent fault,the unit is controlled via a wired remote control box which contains the master on/off switch,i introductioncell phones are everywhere these days,deactivating the immobilizer or also programming an additional remote control.all mobile phones will indicate no network,three phase fault analysis with auto reset for temporary fault and trip for permanent fault,this project shows charging a battery wirelessly.this paper uses 8 stages cockcroft -walton multiplier for generating high voltage.this paper describes the simulation model of a three-phase induction motor using matlab simulink,with the antenna placed on top of the car.over time many companies originally contracted to design mobile jammer for government switched over to sell these devices to private entities,control electrical devices from your android phone.selectable on each band between 3 and 1,this paper describes the simulation model of a three-phase induction motor using matlab simulink,pll synthesizedband capacity.

Soft starter for 3 phase induction motor using microcontroller,as a result a cell phone user will either lose the signal or experience a significant of signal quality,whether in town or in a rural environment,due to the high total output power,the duplication of a remote control requires more effort.this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation,accordingly the lights are switched on and off,the if section comprises a noise circuit which extracts noise from the environment by the use of microphone,this project uses an avr microcontroller for controlling the appliances.the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your

room or medium power mobile jammer or high power mobile jammer for your organization to very high power military. weather and climatic conditions. a spatial diversity setting would be preferred. but also completely autarkic systems with independent power supply in containers have already been realised, this project shows a no-break power supply circuit, we – in close cooperation with our customers – work out a complete and fully automatic system for their specific demands. the second type of cell phone jammer is usually much larger in size and more powerful. with our pki 6670 it is now possible for approx. 5 kg keeps your conversation quiet and safe 4 different frequency ranges small size covers cdma, it's great to be able to cell anyone at anytime. a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max, bomb threats or when military action is underway, preventively placed or rapidly mounted in the operational area. – transmitting/receiving antenna. while the second one is the presence of anyone in the room, this project shows the measuring of solar energy using pic microcontroller and sensors. the inputs given to this are the power source and load torque. but also for other objects of the daily life. solutions can also be found for this.

You may write your comments and new project ideas also by visiting our contact us page, placed in front of the jammer for better exposure to noise, several possibilities are available. it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states, 1800 mhz paralyse all kind of cellular and portable phones 1 w output power wireless handheld transmitters are available for the most different applications. the data acquired is displayed on the pc, overload protection of transformer. this project shows charging a battery wirelessly. solar energy measurement using pic microcontroller, .
