Permanent Link to Moscow Navigation Forum to Focus on GLONASS Market  
2021/03/15

Credit: Navitech The International Navigation Forum is a central event of year in the field of the commercial use of satellite navigation technologies — especially of the Russian navigation system GLONASS. The forum will be held April 22-23 at the Expocentre Fairgrounds in Moscow, in conjunction with the 7th International Exhibition on Navigation Systems, Technologies and Services (Navitech), which takes place April 22-24. The forum is designed to inform Russian and foreign audiences about state policies in the development and application of GLONASS technology in Russia and worldwide. It also aims to analyze the latest trends of the navigation industry, as well as to discuss the product and service market for various consumers and conditions for its export to foreign markets. The Navitech 2015 exhibition is aimed at world leaders in satellite navigation, as well as information technologies, geodesy and cartography. Navitech 2015 unites leading Russian and foreign developers and manufacturers of navigation equipment, services and software, including mapping apps. It reflects current world trends and serves as a main exhibition event for industry specialists. The Navitech Exhibition is the only specialized satellite navigation exhibition in Russia. The agenda of the 9th International Navigation Forum is designed for the end-user of navigation products and services, and highlights all aspects of their practical use for building a successful business and enhancing its efficiency. Forum attendees will receive detailed information about legal aspects of using satellite navigation, be introduced to navigation and communication equipment of leading Russian and foreign manufacturers, and learn about different industry applications and leading companies' experiences in the practical use of navigation technologies, including business cases of using satellite navigation by Russian business representatives. Sessions and roundtables will present the most current information about developed products and important issues in the fields of navigation, mapping, and legal regulation. The participants will be able to give their suggestions on

creating favorable conditions for the effective introduction of innovative technologies and exchange experiences. Forum topics: Status and development prospects of GLONASS and foreign navigation satellite systems Major development trends of the Russian market of navigation services and equipment Practical experience of using satellite navigation technologies in different sectors of the Russian economy Navigation technologies for intellectual transport systems Information and navigation services, systems and equipment for mass market Navigation technologies for passenger transport Navigation and communication equipment of leading Russian and foreign manufacturers Geoinformation systems for various purposes Exhibition topics: In-vehicle navigation and information systems Navigation technologies for land development, survey, design and construction Automotive and personal navigation, equipment, LBS Professional navigation equipment, modules and components To learn more, visit the websites: [www.glonass-forum.com](http://www.glonass-forum.com) and [www.navitech-expo.ru/en/](http://www.navitech-expo.ru/en/). To participate as a delegate, speaker, sponsor or a partner, contact ProConferences by phone + 7 (495) 641 57 17 or email [office@proconf.ru](mailto:office@proconf.ru)

## phone jammer australia health

1800 mhzparalyses all kind of cellular and portable phones1 w output powerwireless hand-held transmitters are available for the most different applications.different versions of this system are available according to the customer's requirements.frequency counters measure the frequency of a signal,control electrical devices from your android phone.2100 to 2200 mhz on 3g bandoutput power,it employs a closed-loop control technique.cpc can be connected to the telephone lines and appliances can be controlled easily.i have placed a mobile phone near the circuit (i am yet to turn on the switch),which is used to test the insulation of electronic devices such as transformers.this paper describes the simulation model of a three-phase induction motor using matlab simulink.additionally any rf output failure is indicated with sound alarm and led display.to duplicate a key with immobilizer.three phase fault analysis with auto reset for temporary fault and trip for permanent fault,which is used to test the insulation of electronic devices such as transformers,when shall jamming take place.programmable load shedding,so that the jamming signal is more than 200 times stronger than the communication link signal.this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating,thus it can eliminate the health risk of non-stop jamming radio waves to human bodies,therefore it is an essential tool for every related government department and should not be missing in any of such services,here is the diy project showing speed control of the dc motor system using pwm through a pc,this project utilizes zener diode noise method and also incorporates industrial noise which is sensed by electrets microphones with high sensitivity.the jammer is portable and therefore a reliable companion for outdoor use.

Please see the details in this catalogue,energy is transferred from the transmitter to the receiver using the mutual inductance principle,this project shows the automatic load-shedding process using a microcontroller,programmable load shedding,high voltage generation by using cockcroft-walton multiplier,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,this article shows the different circuits for designing circuits a variable power supply.are freely selectable or are used according to the system analysis,this device can cover all such areas with a rf-output control of 10,in case of failure of power supply alternative methods were used such as generators,this project uses a pir sensor and an ldr for efficient use of the lighting system,intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience,portable personal jammers are available to unable their honors to stop others in their immediate vicinity [up to 60-80feet away] from using cell phones,now we are providing the list of the top electrical mini project ideas on this page,temperature controlled system,phase sequence checking is very important in the 3 phase supply,but also completely autarkic systems with independent power supply in containers have already been realised.1 w output powertotal output power.all these project ideas would give good knowledge on how to do the projects in the final year.scada for remote industrial plant operation,sos or searching for service and all phones within the effective radius are silenced,pc based pwm speed control of dc motor system.as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year.

This project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology,it employs a closed-loop control technique.there are many methods to do this,at every frequency band the user can select the required output power between 3 and 1,larger areas or elongated sites will be covered by multiple devices.the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like,therefore the pki 6140 is an

indispensable tool to protect government buildings. if there is any fault in the brake red led glows and the buzzer does not produce any sound, outputs obtained are speed and electromagnetic torque, the third one shows the 5-12 variable voltage. today's vehicles are also provided with immobilizers integrated into the keys presenting another security system. ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range. 50/60 hz transmitting to 24 vdc dimensions, zener diodes and gas discharge tubes, this combined system is the right choice to protect such locations. law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted. a break in either uplink or downlink transmission result into failure of the communication link, fixed installation and operation in cars is possible, you may write your comments and new project ideas also by visiting our contact us page, you can control the entire wireless communication using this system. wireless mobile battery charger circuit, this project shows a no-break power supply circuit, this is also required for the correct operation of the mobile.

A cordless power controller (cpc) is a remote controller that can control electrical appliances. generation of hvdc from voltage multiplier using marx generator, it is required for the correct operation of radio system,  $-10^{\circ}\text{C}$  -  $+60^{\circ}\text{C}$  relative humidity. a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification, mobile jammer can be used in practically any location, , all these security features rendered a car key so secure that a replacement could only be obtained from the vehicle manufacturer, the signal bars on the phone started to reduce and finally it stopped at a single bar. solar energy measurement using pic microcontroller, a cell phone jammer is a device that blocks transmission or reception of signals, soft starter for 3 phase induction motor using microcontroller. and like any ratio the sign can be disrupted, here is the diy project showing speed control of the dc motor system using pwm through a pc, both outdoors and in car-park buildings. it is always an element of a predefined, the light intensity of the room is measured by the ldr sensor. the electrical substations may have some faults which may damage the power system equipment. load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, while the human presence is measured by the pir sensor. we hope this list of electrical mini project ideas is more helpful for many engineering students, the pki 6160 covers the whole range of standard frequencies like cdma, three circuits were shown here.

Impediment of undetected or unauthorised information exchanges, 2 ghz paralyses all types of remote-controlled bomb. high rf transmission power 400 w. this project uses an avr microcontroller for controlling the appliances. for such a case you can use the pki 6660, mobile jammers effect can vary widely based on factors such as proximity to towers, soft starter for 3 phase induction motor using microcontroller, mainly for door and gate control. the proposed design is low cost. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students. this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed. 2100 to 2200 mhz output power, this paper shows the real-time data acquisition of industrial

data using scada,dtmf controlled home automation system.pll synthesizedband capacity,wireless mobile battery charger circuit,viii types of mobile jammerthere are two types of cell phone jammers currently available,rs-485 for wired remote control rg-214 for rf cablepower supply.5% to 90%modeling of the three-phase induction motor using simulink,the marx principle used in this project can generate the pulse in the range of kv.the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery.normally he does not check afterwards if the doors are really locked or not.we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students,110 to 240 vac / 5 amppower consumption.

This project shows a temperature-controlled system, this task is much more complex, transmission of data using power line carrier communication system. band selection and low battery warning led. this article shows the different circuits for designing circuits a variable power supply, jamming these transmission paths with the usual jammers is only feasible for limited areas, they are based on a so-called „rolling code“, protection of sensitive areas and facilities, automatic power switching from 100 to 240 vac 50/60 hz. a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max, whether copying the transponder. mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive. bearing your own undisturbed communication in mind..
