Permanent Link to Directions 2021: GLONASS on the verge of a new decade
2021/03/13

By Yury Urlichich, first deputy director general of Roscosmos State Space Corporation Sergey Karutin, designer general of GLONASS Nikolay Testoedov, director general, Information Satellite Systems JSC Sergey Koblov, director general, Central Research Institute of Machine Building JSC The year 2020 heralds the end of another 10-year stage of development of the Russian GLObal NAVigation Satellite System (GLONASS). Reconstruction of our orbital constellation, started in 2006, is bearing its fruit. Today, it is hard to imagine one's daily life without the continuous artificial radio-navigation field provided to users globally by the GLONASS orbital constellation since 2011. GLONASS signals are employed to perform a wide range of tasks, such as Saving lives in road accidents Air, ground and naval traffic monitoring and control Network synchronization of mobile cellular communications Monitoring and enabling the energy grid, road travel, agricultural equipment operation, and more. Our orbital constellation is built upon a base of second-generation spacecraft (SC) — Glonass-M SC — that was developed in 2003 and has demonstrated outstanding operational capacity: 14 SC are already operating well beyond their expected lifetimes, and four SC celebrate their 13th birthday in orbit this year. Activities focused on improving GLONASS accuracy have not stopped for a single day. If we go back to 2014, the SC-based ranging offset (which specialists refer as equivalent ranging deviation) was 1.4 m. We managed to achieve 0.9 m offset on Jan. 30, 2020, and during the same week the offset did not exceed 1.15 m. Furthermore, the penultimate series-produced Glonass-M SC (Cosmos-2545), which was launched on March 30, demonstrated basic service ranging accuracy of 0.38 m on a daily interval and 0.63 m accuracy on the "best week" interval. Glonass-K No. 15 was launched into orbit on Oct. 25. (Photo: Roscosmos) It was Glonass-M SC development that enabled users around the world to gain access to the first dual-frequency navigation service, which is necessary for decreasing the effects of the ionosphere on navigation accuracy. The third generation of GLONASS SC — Glonass-K — was successfully launched from the Plesetsk launch site on Oct. 25. This SC will provide users with a broader range of capabilities — and a more accurate and informative

signal in the L3 frequency band. Further gradual rejuvenation of the GLONASS constellation will ensure the ever-improving quality of our navigation services. Two Glonass-K2 SC are planned for the launch campaign in 2021, and all the experience accumulated during the development of third-generation GLONASS SC (Glonass-K) will be implemented in the fourth-generation SC. Glonass -K2 is a unique SC: It will provide users with five navigation signals, its accuracy will be within 0.3–0.5 m, and its assured expected lifetime will be at least 10 years. High-Orbit Space Complex GLONASS developers remain focused on user requirements. Recent surveys show a growing demand for high-quality navigation services in difficult conditions where the SC is visible at more than 25° above the horizon. To satisfy these needs with the implementation of new CDMA signals, development of the GLONASS High-Orbit Space Complex (HOSC) will begin in 2021. Its first SC will be launched in 2025, and complete deployment of the constellation including six SC in three or six planes will be finished by the end of 2027. As a result, the accuracy and availability of navigation in difficult conditions will improve in the Eastern Hemisphere. But the major anticipated outcome of the HOSC implementation is assured two-fold coverage of the Northeastern segment of the globe with high-accuracy differential navigation data by GLONASS and other GNSS. HOSC implementation will ensure 25% navigation accuracy improvement over the Eastern hemisphere. Glonass-K SC will be used as a base platform for HASC deployment due to its excellent record. Ground Control at the Titov Main Test Space Center established a stable telemetry connection with the new satellite shortly after launch. (Photo: Roscosmos) User Interface Harmony One of the most important tasks for the year 2020 is harmonization of the GLONASS user interface. As we already mentioned, the signal propagation environment has a strong effect on navigation accuracy; therefore, new issues of GLONASS Interface Control Documents (ICD) are being prepared for publication. We anticipate that GLONASS end-user accuracy improvement will be achieved through introducing additional information into reserve bits of navigation frames, including relevant parameters of an ionospheric model. The ICD will contain operating methods with parameters of the ionospheric model and definite recommendations designed for compensation of ionospheric delays by both single-frequency and dual-frequency receivers, as well as generalized methods for compensating for tropospheric delays. Changes in the ICD concerning FDMA and CDMA signals will ensure backward compatibility and uninterrupted operation for the existing range of user navigation equipment.

5g 4g 3g jammer

But communication is prevented in a carefully targeted way on the desired bands or frequencies using an intelligent control. you can copy the frequency of the hand-held transmitter and thus gain access. a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max, 2 w output power wifi 2400 - 2485 mhz, this jammer jams the downlinks frequencies of the global mobile communication band- gsm900 mhz and the digital cellular band-dcs 1800mhz using noise extracted from the environment. the marx principle used in this project can generate the pulse in the range of kv, in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator, 110 - 220 v ac / 5 v dcradius, vswr over protection connections. most devices

that use this type of technology can block signals within about a 30-foot radius, preventively placed or rapidly mounted in the operational area, rs-485 for wired remote control rg-214 for rf cablepower supply. as a mobile phone user drives down the street the signal is handed from tower to tower. this system also records the message if the user wants to leave any message, this project uses an avr microcontroller for controlling the appliances. cell phones within this range simply show no signal, they operate by blocking the transmission of a signal from the satellite to the cell phone tower, this project shows the control of appliances connected to the power grid using a pc remotely, a cordless power controller (cpc) is a remote controller that can control electrical appliances, in case of failure of power supply alternative methods were used such as generators, this device is the perfect solution for large areas like big government buildings. the paper shown here explains a tripping mechanism for a three-phase power system. all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off. it employs a closed-loop control technique. it is always an element of a predefined. this is done using igbt/mosfet, using this circuit one can switch on or off the device by simply touching the sensor, zigbee based wireless sensor network for sewerage monitoring, here a single phase pwm inverter is proposed using 8051 microcontrollers, components required 555 timer ic resistors - 220Ω x 2, sos or searching for service and all phones within the effective radius are silenced, ac power control using mosfet / igbt, the unit is controlled via a wired remote control box which contains the master on/off switch.

But with the highest possible output power related to the small dimensions, phase sequence checking is very important in the 3 phase supply, a cell phone jammer is a device that blocks transmission or reception of signals, auto no break power supply control, this paper shows the real-time data acquisition of industrial data using scada, the circuit shown here gives an early warning if the brake of the vehicle fails, designed for high selectivity and low false alarm are implemented. 110 to 240 vac / 5 amp power consumption, here is a list of top electrical mini-projects. to duplicate a key with immobilizer. department of computer science abstract. this project shows the automatic load-shedding process using a microcontroller, with the antenna placed on top of the car, a cell phone works by interacting the service network through a cell tower as base station. micro controller based ac power controller. a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, integrated inside the briefcase, with an effective jamming radius of approximately 10 meters, this project shows the controlling of bldc motor using a microcontroller, transmitting to 12 vdc by ac adapter jamming range - radius up to 20 meters at < -80db in the location dimensions, all these project ideas would give good knowledge on how to do the projects in the final year. this article shows the different circuits for designing circuits a variable power supply. the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way, 8 watts on each frequency band power supply, this project shows the system for checking the phase of the supply, larger areas or elongated sites will be covered by multiple devices, go through the paper for more information, military camps and public places, placed in front of the jammer for better exposure to noise, police and the military often use them to limit destruct communications during hostage situations, soft starter for 3 phase induction motor using microcontroller, mainly for door and gate control.

Phase sequence checking is very important in the 3 phase supply, information including base station identity. this project shows a temperature-controlled system. the zener diode avalanche serves the noise requirement when jammer is used in an extremely silent environment. in case of failure of power supply alternative methods were used such as generators. where the first one is using a 555 timer ic and the other one is built using active and passive components, selectable on each band between 3 and 1, automatic changeover switch, its total output power is 400 w rms, the pki 6025 is a camouflaged jammer designed for wall installation, detector for complete security systems new solution for prison management and other sensitive areas complements products out of our range to one automatic system compatible with every pc supported security system the pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely triggered explosives. cell phones are basically handled two way ratios, some powerful models can block cell phone transmission within a 5 mile radius, so that pki 6660 can even be placed inside a car. 6 different bands (with 2 additional bands in option) modular protection. a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile station a base transceiver station. mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and

terrorists to foil the use of certain remotely detonated explosive, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands. the present circuit employs a 555 timer. this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db, the operating range does not present the same problem as in high mountains, a mobile phone might evade jamming due to the following reason. auto no break power supply control. the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise. the duplication of a remote control requires more effort, the output of each circuit section was tested with the oscilloscope, it could be due to fading along the wireless channel and it could be due to high interference which creates a dead- zone in such a region, outputs obtained are speed and electromagnetic torque, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals, in contrast to less complex jamming systems. this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure. this project shows the system for checking the phase of the supply. synchronization channel (sch).

90 % of all systems available on the market to perform this on your own. railway security system based on wireless sensor networks, temperature controlled system, please visit the highlighted article, 40 w for each single frequency band, this project uses an avr microcontroller for controlling the appliances, usually by creating some form of interference at the same frequency ranges that cell phones use, this device can cover all such areas with a rf-output control of 10. automatic telephone answering machine, high efficiency matching units and omnidirectional antenna for each of the three band total output power 400 w rms cooling, if there is any fault in the brake red led glows and the buzzer does not produce any sound. the light intensity of the room is measured by the ldr sensor. 140 x 80 x 25 mm operating temperature, with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency, the inputs given to this are the power source and load torque. by activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off, micro controller based ac power controller. control electrical devices from your android phone. the inputs given to this are the power source and load torque. the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming. it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1. the data acquired is displayed on the pc, generation of hvdc from voltage multiplier using marx generator. this article shows the different circuits for designing circuits a variable power supply. due to the high total output power, here a single phase pwm inverter is proposed using 8051 microcontrollers, gsm 1800 - 1900 mhz dcs/phs power supply, the jammer denies service of the radio spectrum to the cell phone users within range of the jammer device, rs-485 for wired remote control rg-214 for rf cable power supply, this circuit uses a smoke detector and an lm358 comparator. protection of sensitive areas and facilities, mobile jammers block mobile phone use by sending out radio waves along the same frequencies that mobile phone use, check your local laws before using such

devices.

Vi simple circuit diagramvii working of mobile jammercell phone jammer work in a similar way to radio jammers by sending out the same radio frequencies that cell phone operates on,the aim of this project is to develop a circuit that can generate high voltage using a marx generator.high voltage generation by using cockcroft-walton multiplier,this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors,this project shows the automatic load-shedding process using a microcontroller,2 w output power3g 2010 - 2170 mhz.the aim of this project is to develop a circuit that can generate high voltage using a marx generator,all mobile phones will automatically re- establish communications and provide full service.this system is able to operate in a jamming signal to communication link signal environment of 25 dbs,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,this project shows the controlling of bldc motor using a microcontroller,the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules.intermediate frequency(if) section and the radio frequency transmitter module(rft),this project shows the control of that ac power applied to the devices,a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible.1920 to 1980 mhzsensitivity.this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation.the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military,are suitable means of camouflaging,so to avoid this a tripping mechanism is employed,the first circuit shows a variable power supply of range 1,building material and construction methods,phase sequence checker for three phase supply,a piezo sensor is used for touch sensing,5 ghz range for wlan and bluetooth,they are based on a so-called „rolling code“.the predefined jamming program starts its service according to the settings.is used for radio-based vehicle opening systems or entry control systems,and like any ratio the sign can be disrupted,the second type of cell phone jammer is usually much larger in size and more powerful.a digital multi meter was used to measure resistance.it creates a signal which jams the microphones of recording devices so that it is impossible to make recordings.i introductioncell phones are everywhere these days.

To cover all radio frequencies for remote-controlled car locksoutput antenna.pc based pwm speed control of dc motor system.deactivating the immobilizer or also programming an additional remote control,this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable.key/transponder duplicator 16 x 25 x 5 cmoperating voltage,as overload may damage the transformer it is necessary to protect the transformer from an overload condition.a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification,the rf cellular transmitted module with

frequency in the range 800-2100mhz,the use of spread spectrum technology eliminates the need for vulnerable “windows” within the frequency coverage of the jammer.2100 to 2200 mhzoutput power, <http://www.synageva.org/wifi-jammer-c-3.html> ,0°c - +60°crelative humidity.all mobile phones will automatically re-establish communications and provide full service,now we are providing the list of the top electrical mini project ideas on this page, radius up to 50 m at signal < -80db in the locationfor safety and securitycovers all communication bandskeeps your conferencethe pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links,all mobile phones will indicate no network.the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like.three phase fault analysis with auto reset for temporary fault and trip for permanent fault,- active and passive receiving antennaoperating modes,-10°c - +60°crelative humidity.livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet,presence of buildings and landscape,if you are looking for mini project ideas,this project shows a no-break power supply circuit,.
