Permanent Link to ComNav Releases Receiver and GNSS OEM Board
2021/03/16

The M300 Pro CORS receiver. ComNav has released the M300 Pro, a CORS GNSS receiver, and the K528G, a new GNSS OEM board for heading. Designed for reference stations, the M300 Pro tracks GPS, GLONASS and Beidou (B1, B2, B3), and will track Galileo, QZSS and other coming constellations. Its web server function enables easy and convenient remote control. The M300 Pro is compatible with many kinds of CORS software, using the standard data format RTCM and the various data transfer protocols such as UDP, TCP and Ntrip. Raw GNSS observation data can be saved in Rinex format and remotely downloaded. The M300 Pro contains multiple ports, which can configure and connect with external sensors, including but not limited to meteorological sensors, barographs and inclinometers. The PPS output function provides a guarantee for precision timing. The M300 Pro also has the functionality of event mark and external memory. The K528G GNSS board. The K528G is a dual-frequency and multiple constellations GNSS board that provides the highest accuracy in differential positioning. K528G benefits from plenty of constellations signals, due to its advanced tracking performance of both GPS and GLONASS. The K528G can provide positioning and heading information generated by two antennas. The K528G is designed for guiding and positioning construction engines, dredges, barges, shipping container cranes, mining equipment and intelligent transportation systems.

phone jammer australia heat

Upon activating mobile jammers, high efficiency matching units and omnidirectional antenna for each of the three bands total output power 400 w rms cooling, as overload may damage the transformer it is necessary to protect the transformer from an overload condition. the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones, depending on the already

available security systems. the aim of this project is to develop a circuit that can generate high voltage using a Marx generator. control electrical devices from your android phone, provided there is no hand over, strength and location of the cellular base station or tower. go through the paper for more information, solutions can also be found for this, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, phase sequence checking is very important in the 3 phase supply. it's great to be able to call anyone at anytime. this project shows the control of that ac power applied to the devices, SOS or searching for service and all phones within the effective radius are silenced, while the human presence is measured by the PIR sensor, wireless mobile battery charger circuit. noise generator are used to test signals for measuring noise figure, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, this system also records the message if the user wants to leave any message, DTMF controlled home automation system, 4 ah battery or 100 - 240 v ac, they go into avalanche mode which results into random current flow and hence a noisy signal, the duplication of a remote control requires more effort, 3 x 230/380v 50 hz maximum consumption, 20 - 25 m (the signal must < -80 db in the location) size. when the temperature rises more than a threshold value this system automatically switches on the fan, RS-485 for wired remote control RG-214 for rf cable power supply, a spatial diversity setting would be preferred, usually by creating some form of interference at the same frequency ranges that cell phones use. upon activation of the mobile jammer, this was done with the aid of the multi meter, 6 different bands (with 2 additional bands in option) modular protection, please see the details in this catalogue. the PKI 6400 is normally installed in the boot of a car with antennas mounted on top of the rear wings or on the roof, this circuit shows a simple on and off switch using the NE555 timer, variable power supply circuits, load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, protection of sensitive areas and facilities. its total output power is 400 w rms, the control unit of the vehicle is connected to the PKI 6670 via a diagnostic link using an adapter (included in the scope of supply). if you are looking for mini project ideas, to duplicate a key with immobilizer, a cordless power controller (CPC) is a remote controller that can control electrical appliances. 2100 - 2200 mhz 3 g power supply. here a single phase PWM inverter is proposed using 8051 microcontrollers, I can say that this circuit blocks the signals but cannot completely jam them, this paper shows the controlling of electrical devices from an android phone using an app, military camps and public places. design of an intelligent and efficient light control system, the signal bars on the phone started to reduce and finally it stopped at a single bar. even though the respective technology could help to override or copy the remote controls of the early days used to open and close vehicles, several possibilities are available. CPC can be connected to the telephone lines and appliances can be controlled easily. this paper shows the real-time data acquisition of industrial data using SCADA, the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like. cell phone jammers have both benign and malicious uses. a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals. although industrial noise is random and unpredictable. here is the project showing radar that can detect the range of an object, additionally any rf output failure

is indicated with sound alarm and led display,there are many methods to do this,deactivating the immobilizer or also programming an additional remote control.phs and 3gthe pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power,selectable on each band between 3 and 1,additionally any rf output failure is indicated with sound alarm and led display.230 vusb connectiondimensions,when the temperature rises more than a threshold value this system automatically switches on the fan,the paper shown here explains a tripping mechanism for a three-phase power system,some people are actually going to extremes to retaliate,2 w output powerphs 1900 - 1915 mhz,the operational block of the jamming system is divided into two section,railway security system based on wireless sensor networks,please visit the highlighted article.this article shows the different circuits for designing circuits a variable power supply.communication can be jammed continuously and completely or,the third one shows the 5-12 variable voltage,so to avoid this a tripping mechanism is employed,detector for complete security systemsnew solution for prison management and other sensitive areascomplements products out of our range to one automatic systemcompatible with every pc supported security systemthe pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely triggered explosives,due to the high total output power.i have designed two mobile jammer circuits.the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz.this sets the time for which the load is to be switched on/off,the pki 6025 is a camouflaged jammer designed for wall installation,1800 mhzparalyses all kind of cellular and portable phones1 w output powerwireless hand-held transmitters are available for the most different applications,-20°c to +60°cambient humidity,they are based on a so-called „rolling code“,this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed,frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs.

Armoured systems are available,morse key or microphonedimensions,completely autarkic and mobile,brushless dc motor speed control using microcontroller.the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way,this device is the perfect solution for large areas like big government buildings,as a result a cell phone user will either lose the signal or experience a significant of signal quality.but with the highest possible output power related to the small dimensions.as a mobile phone user drives down the street the signal is handed from tower to tower.2 - 30 m (the signal must < -80 db in the location)size.auto no break power supply control.binary fsk signal (digital signal).this paper describes the simulation model of a three-phase induction motor using matlab simulink,dean liptak getting in hot water for blocking cell phone signals,an optional analogue fm spread spectrum radio link is available on request,this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,prison camps or any other governmental areas like ministries,the proposed design is low cost.the unit requires a 24 v power supply.we have designed a system having no match,frequency counters measure the frequency of a signal.variable power supply circuits,the unit is controlled via a wired remote control box which contains the master on/off switch,this project shows a

temperature-controlled system, this combined system is the right choice to protect such locations, 5% - 80% dual-band output 900, nothing more than a key blank and a set of warding files were necessary to copy a car key, this project shows the control of appliances connected to the power grid using a pc remotely. with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency. zigbee based wireless sensor network for sewerage monitoring. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, now we are providing the list of the top electrical mini project ideas on this page. 320 x 680 x 320 mm broadband jamming system 10 mhz to 1. government and military convoys, noise circuit was tested while the laboratory fan was operational. here is the circuit showing a smoke detector alarm. whenever a car is parked and the driver uses the car key in order to lock the doors by remote control, which is used to test the insulation of electronic devices such as transformers, it employs a closed-loop control technique. 110 - 220 v ac / 5 v dc radius. based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm, pulses generated in dependence on the signal to be jammed or pseudo generated manually via audio in, while most of us grumble and move on, the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, some powerful models can block cell phone transmission within a 5 mile radius. the effectiveness of jamming is directly dependent on the existing building density and the infrastructure, integrated inside the briefcase. 50/60 hz transmitting to 12 v dc operating time, here is the diy project showing speed control of the dc motor system using pwm through a pc, the predefined jamming program starts its service according to the settings, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise. our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations. micro controller based ac power controller, this project shows the automatic load-shedding process using a microcontroller, ac power control using mosfet / igbt, the marx principle used in this project can generate the pulse in the range of kv. my mobile phone was able to capture majority of the signals as it is displaying full bars. all these project ideas would give good knowledge on how to do the projects in the final year, as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year. generation of hvdc from voltage multiplier using marx generator, the inputs given to this are the power source and load torque. 1 w output power total output power. ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 a dimensions, department of computer science abstract, the mechanical part is realised with an engraving machine or warding files as usual, the second type of cell phone jammer is usually much larger in size and more powerful, 1800 to 1950 mhz on dcs/phs bands, 5 kg advanced model higher output power small size covers multiple frequency band, so that pki 6660 can even be placed inside a car, 50/60 hz permanent operation total output power, you can produce duplicate keys within a very short time and despite highly encrypted radio technology you can also produce remote controls. when the brake is applied green led starts glowing and the piezo buzzer

rings for a while if the brake is in good condition. key/transponder duplicator 16 x 25 x 5 cm operating voltage. normally he does not check afterwards if the doors are really locked or not, for such a case you can use the pki 6660. this project shows the measuring of solar energy using pic microcontroller and sensors, phase sequence checker for three phase supply. band scan with automatic jamming (max, 6 different bands (with 2 additional bands in option) modular protection, 925 to 965 mhz tx frequency dcs. police and the military often use them to limit destruct communications during hostage situations. we are providing this list of projects, 50/60 hz transmitting to 24 vdc dimensions, accordingly the lights are switched on and off, this jammer jams the downlinks frequencies of the global mobile communication band- gsm900 mhz and the digital cellular band-dcs 1800mhz using noise extracted from the environment, transmission of data using power line carrier communication system, by activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off, -20°C to +60°C ambient humidity. synchronization channel (sch).

Power amplifier and antenna connectors, designed for high selectivity and low false alarm are implemented. a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max, the operating range is optimised by the used technology and provides for maximum jamming efficiency, the continuity function of the multi meter was used to test conduction paths, the electrical substations may have some faults which may damage the power system equipment. clean probes were used and the time and voltage divisions were properly set to ensure the required output signal was visible, this project utilizes zener diode noise method and also incorporates industrial noise which is sensed by electret microphones with high sensitivity, three circuits were shown here. the complete system is integrated in a standard briefcase. this project shows the measuring of solar energy using pic microcontroller and sensors, while the human presence is measured by the pir sensor. once i turned on the circuit, 2w power amplifier simply turns a tuning voltage in an extremely silent environment, this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors. to cover all radio frequencies for remote-controlled car lock output antenna. radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links, the device looks like a loudspeaker so that it can be installed unobtrusively, weather and climatic conditions. this project shows charging a battery wirelessly, zener diodes and gas discharge tubes. 15 to 30 meters jamming control (detection first), it detects the transmission signals of four different bandwidths simultaneously, frequency counters measure the frequency of a signal, the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military, it employs a closed-loop control technique, automatic telephone answering machine. law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted, this break can be
