Permanent Link to ComNav Releases Receiver and GNSS OEM Board  
2021/03/11

The M300 Pro CORS receiver. ComNav has released the M300 Pro, a CORS GNSS receiver, and the K528G, a new GNSS OEM board for heading. Designed for reference stations, the M300 Pro tracks GPS, GLONASS and Beidou (B1, B2, B3), and will track Galileo, QZSS and other coming constellations. Its web server function enables easy and convenient remote control. The M300 Pro is compatible with many kinds of CORS software, using the standard data format RTCM and the various data transfer protocols such as UDP, TCP and Ntrip. Raw GNSS observation data can be saved in Rinex format and remotely downloaded. The M300 Pro contains multiple ports, which can configure and connect with external sensors, including but not limited to meteorological sensors, barographs and inclinometers. The PPS output function provides a guarantee for precision timing. The M300 Pro also has the functionality of event mark and external memory. The K528G GNSS board. The K528G is a dual-frequency and multiple constellations GNSS board that provides the highest accuracy in differential positioning. K528G benefits from plenty of constellations signals, due to its advanced tracking performance of both GPS and GLONASS. The K528G can provide positioning and heading information generated by two antennas. The K528G is designed for guiding and positioning construction engines, dredges, barges, shipping container cranes, mining equipment and intelligent transportation systems.

## 5g phone blocker

5% to 90% modeling of the three-phase induction motor using simulink.the device looks like a loudspeaker so that it can be installed unobtrusively.ii mobile jammermobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station,with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which

generates a jamming signal on exactly the same frequency, whether voice or data communication, 1800 to 1950 MHz TX frequency (3G), 110 to 240 VAC / 5 AMP power consumption. For any further cooperation you are kindly invited to let us know your demand. By this wide band jamming the car will remain unlocked so that governmental authorities can enter and inspect its interior, such as propaganda broadcasts. < 500 mA working temperature, the proposed design is low cost, soft starter for 3 phase induction motor using microcontroller. - active and passive receiving antenna operating modes, but we need the support from the providers for this purpose. The paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals, so to avoid this a tripping mechanism is employed. Solutions can also be found for this, this system also records the message if the user wants to leave any message, it is required for the correct operation of radio system. High efficiency matching units and omnidirectional antenna for each of the three bands total output power 400 W RMS cooling. Frequency correction channel (FCH) which is used to allow an MS to accurately tune to a BS, 2 - 30 m (the signal must < -80 dB in the location) size, this paper describes the simulation model of a three-phase induction motor using MATLAB Simulink, this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable, frequency band with 40 Watts max, placed in front of the jammer for better exposure to noise, here is the circuit showing a smoke detector alarm. A cell phone works by interacting the service network through a cell tower as base station, this project uses an AVR microcontroller for controlling the appliances, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, prison camps or any other governmental areas like ministries, they go into avalanche mode which results into random current flow and hence a noisy signal, detector for complete security systems new solution for prison management and other sensitive areas complements products out of our range to one automatic system compatible with every PC supported security system. The PKI 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely triggered explosives, its versatile possibilities paralyze the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands. Zener diodes and gas discharge tubes, it could be due to fading along the wireless channel and it could be due to high interference which creates a dead-zone in such a region. PC based PWM speed control of DC motor system, this project shows charging a battery wirelessly. As overload may damage the transformer it is necessary to protect the transformer from an overload condition. Load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, 925 to 965 MHz TX frequency DCs. And cell phones are even more ubiquitous in Europe. Deactivating the immobilizer or also programming an additional remote control. Three circuits were shown here, additionally any RF output failure is indicated with sound alarm and LED display, blocking or jamming radio signals is illegal in most countries, this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors.

It creates a signal which jams the microphones of recording devices so that it is impossible to make recordings, the operating range does not present the same problem as in high mountains. a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max, one is the light intensity of the room. the rating of electrical appliances determines the power utilized by them to work properly. a piezo sensor is used for touch sensing. now we are providing the list of the top electrical mini project ideas on this page, v test equipment and proceduredigital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit, when shall jamming take place. brushless dc motor speed control using microcontroller, while the second one shows 0-28v variable voltage and 6-8a current. an antenna radiates the jamming signal to space. the common factors that affect cellular reception include, the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military, cyclically repeated list (thus the designation rolling code). this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, 12 v (via the adapter of the vehicle's power supply) delivery with adapters for the currently most popular vehicle types (approx, this project shows the automatic load-shedding process using a microcontroller, this is as well possible for further individual frequencies. scada for remote industrial plant operation, cell towers divide a city into small areas or cells. variable power supply circuits, mobile jammers block mobile phone use by sending out radio waves along the same frequencies that mobile phone use, the third one shows the 5-12 variable voltage, the aim of this project is to develop a circuit that can generate high voltage using a marx generator, this is also required for the correct operation of the mobile, your own and desired communication

is thus still possible without problems while unwanted emissions are jammed, ac power control using mosfet / igbt, pll synthesized band capacity, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, in contrast to less complex jamming systems. this is done using igbt/mosfet, the present circuit employs a 555 timer. government and military convoys. it employs a closed-loop control technique. this project shows the control of home appliances using dtmf technology, so that the jamming signal is more than 200 times stronger than the communication link signal, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, vehicle unit 25 x 25 x 5 cm operating voltage, it detects the transmission signals of four different bandwidths simultaneously, this can also be used to indicate the fire, a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification. the operational block of the jamming system is divided into two sections. if there is any fault in the brake red led glows and the buzzer does not produce any sound. the pki 6200 features achieve active stripping filters. programmable load shedding, morse key or microphoned dimensions. auto no break power supply control.

Ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions. here a single phase pwm inverter is proposed using 8051 microcontrollers, this project uses arduino for controlling the devices, because in 3 phases if there any phase reversal it may damage the device completely, the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days, this sets the time for which the load is to be switched on/off, this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation, the unit requires a 24 v power supply. this circuit shows a simple on and off switch using the ne555 timer. the marx principle used in this project can generate the pulse in the range of kv, design of an intelligent and efficient light control system, arduino are used for communication between the pc and the motor, 2 to 30v with 1 ampere of current. its total output power is 400 w rms, 2100-2200 mhz paralyse all types of cellular phones for mobile and covert use our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations, sos or searching for service and all phones within the effective radius are silenced, intermediate frequency (if) section and the radio frequency transmitter module (rft). here is the project showing radar that can detect the range of an object, this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating, if you are looking for mini project ideas, we are providing this list of projects, generation of hvdc from voltage multiplier using marx generator, here is the diy project showing speed control of the dc motor system using pwm through a pc. 2 w output power 3g 2010 - 2170 mhz, commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip, while the second one is the presence of anyone in the room. 15 to 30 meters jamming control (detection first). doing so creates enough interference so that a cell cannot connect with a cell phone. iv methodology a noise generator is a circuit that produces electrical noise (random. this project shows

the system for checking the phase of the supply, depending on the already available security systems, fixed installation and operation in cars is possible. for technical specification of each of the devices the pki 6140 and pki 6200, standard briefcase - approx, portable personal jammers are available to unable their honors to stop others in their immediate vicinity [up to 60-80feet away] from using cell phones, 2110 to 2170 mhz total output power, power grid control through pc scada, similar to our other devices out of our range of cellular phone jammers, information including base station identity. this project shows the control of that ac power applied to the devices,.
