Permanent Link to Study of Atmospheric 'Froth' May Help GPS Communications
2021/03/10

Editor's note: GPS World Innovation editor Richard Langley has co-authored a study, described below, exploring how irregularities in Earth's upper atmosphere can distort GPS signals, an important step toward mitigation. The Aurora Borealis viewed by the crew of Expedition 30 on board the International Space Station. The sequence of shots was taken on February 7, 2012 from 09:54:04 to 10:03:59 GMT, on a pass from the North Pacific Ocean, west of Canada, to southwestern Illinois. Image Credit: NASA/JSC News from the Jet Propulsion Laboratory

When you don't know how to get to an unfamiliar place, you probably rely on a smartphone or other device with a GPS module for guidance. You may not realize that, especially at high latitudes on our planet, signals traveling between GPS satellites and your device can get distorted in Earth's upper atmosphere. Researchers at NASA's Jet Propulsion Laboratory (JPL), Pasadena, Calif., in collaboration with the University of New Brunswick in Canada, are studying irregularities in the ionosphere, a part of the atmosphere centered about 217 miles (350 kilometers) above the ground that defines the boundary between Earth and space. The ionosphere is a shell of charged particles (electrons and ions), called plasma, that is produced by solar radiation and energetic particle impact. The new study, published in the journal *Geophysical Research Letters*, compares turbulence in the auroral region to that at higher latitudes, and gains insights that could have implications for the mitigation of disturbances in the ionosphere. Auroras are spectacular multicolored lights in the sky that mainly occur when energetic particles driven from the magnetosphere, the protective magnetic bubble that surrounds Earth, crash into the ionosphere below it. The auroral zones are narrow oval-shaped bands over high latitudes outside the polar caps, which are regions around Earth's magnetic poles. This study focused on the atmosphere above the Northern Hemisphere. "We want to explore the near-Earth plasma and find out how big plasma irregularities need to be to interfere with navigation signals broadcast by GPS," said Esayas Shume. Shume is a researcher at JPL and the California Institute

of Technology in Pasadena, and lead author of the study. If you think of the ionosphere as a fluid, the irregularities comprise regions of lower density (bubbles) in the neighborhood of high-density ionization areas, creating the effect of clumps of more and less intense ionization. This “froth” can interfere with radio signals including those from GPS and aircraft, particularly at high latitudes. The size of the irregularities in the plasma gives researchers clues about their cause, which help predict when and where they will occur. More turbulence means a bigger disturbance to radio signals. “One of the key findings is that there are different kinds of irregularities in the auroral zone compared to the polar cap,” said Anthony Mannucci, supervisor of the ionospheric and atmospheric remote sensing group at JPL. “We found that the effects on radio signals will be different in these two locations.” The researchers found that abnormalities above the Arctic polar cap are of a smaller scale — about 0.62 to 5 miles (1 to 8 kilometers) — than in the auroral region, where they are 0.62 to 25 miles (1 to 40 kilometers) in diameter. Why the difference? As Shume explains, the polar cap is connected to solar wind particles and electric fields in interplanetary space. On the other hand, the region of auroras is connected to the energetic particles in Earth’s magnetosphere, in which magnetic field lines close around Earth. These are crucial details that explain the different dynamics of the two regions. CAScade, Smallsat and IOnospheric Polar Explorer (CASSIOPE) is a made-in-Canada small satellite from the Canadian Space Agency. It is comprised of three working elements that use the first multi-purpose small satellite platform from the Canadian Small Satellite Bus Program. Image Credit: Canadian Space Agency To look at irregularities in the ionosphere, researchers used data from the Canadian Space Agency satellite Cascade Smallsat and Ionospheric Polar Explorer (CASSIOPE), which launched in September 2013. The satellite covers the entire region of high latitudes, making it a useful tool for exploring the ionosphere. The data come from one of the instruments on CASSIOPE that looks at GPS signals as they skim the ionosphere. The instrument was conceived by researchers at the University of New Brunswick. “It’s the first time this kind of imaging has been done from space,” said Attila Komjathy, JPL principal investigator and co-author of the study. “No one has observed these dimensional scales of the ionosphere before.” The research has numerous applications. For instance, aircraft flying over the North Pole rely on solid communications with the ground; if they lose these signals, they may be required to change their flight paths, Mannucci said. Radio telescopes may also experience distortion from the ionosphere; understanding the effects could lead to more accurate measurements for astronomy. “It causes a lot of economic impact when these irregularities flare up and get bigger,” he said. NASA’s Deep Space Network, which tracks and communicates with spacecraft, is affected by the ionosphere. Komjathy and colleagues also work on mitigating and correcting for these distortions for the DSN. They can use GPS to measure the delay in signals caused by the ionosphere and then relay that information to spacecraft navigators who are using the DSN’s tracking data. “By understanding the magnitude of the interference, spacecraft navigators can subtract the distortion from the ionosphere to get more accurate spacecraft locations,” Mannucci said. Other authors on the study were Richard B. Langley of the Geodetic Research Laboratory, University of New Brunswick, Fredericton, New Brunswick, Canada; and Olga Verkhoglyadova and Mark D. Butala of JPL. Funding for the research came from NASA’s Science Mission

Directorate in Washington. JPL, a division of the California Institute of Technology in Pasadena, manages the Deep Space Network for NASA.

phone jammer diy ugly

2110 to 2170 mhz total output power. this device is the perfect solution for large areas like big government buildings, the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz, livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet. most devices that use this type of technology can block signals within about a 30-foot radius, starting with induction motors is a very difficult task as they require more current and torque initially, ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions, intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience, a piezo sensor is used for touch sensing. for such a case you can use the pki 6660, for technical specification of each of the devices the pki 6140 and pki 6200, although industrial noise is random and unpredictable. 230 v usb connection dimensions. this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating, this project shows charging a battery wirelessly. railway security system based on wireless sensor networks, this project shows the controlling of bldc motor using a microcontroller. this sets the time for which the load is to be switched on/off, this project shows the control of that ac power applied to the devices, this project shows a temperature-controlled system, check your local laws before using such devices, 47pf 30pf trimmer capacitor led coils 3 turn 24 awg. the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones, its called denial-of-service attack, you may write your comments and new project ideas also by visiting our contact us page, energy is transferred from the transmitter to the receiver using the mutual inductance principle, communication system technology use a technique known as frequency division duplexing (fdx) to serve users with a frequency pair that carries information at the uplink and downlink without interference, 2 to 30v with 1 ampere of current, similar to our other devices out of our range of cellular phone jammers. this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted. the integrated working status indicator gives full information about each band module, phase sequence checker for three phase supply, morse key or microphone dimensions. load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, i have placed a mobile phone near the circuit (i am yet to turn on the switch), so that the jamming signal is more than 200 times stronger than the communication link signal, we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, 2 ghz paralyses all types of remote-controlled bombs high rf transmission power 400 w, incoming calls are blocked as if the mobile phone were off, this was done with the aid of the multi meter. this circuit uses a smoke detector and an lm358 comparator, the signal must be < - 80 db in the location dimensions, 2 to 30v with 1 ampere of current, binary fsk signal (digital signal). a cordless power controller (cpc) is a remote controller that can

control electrical appliances, this project shows a temperature-controlled system. I have designed two mobile jammer circuits, the multi meter was capable of performing continuity test on the circuit board.

This paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors, are suitable means of camouflaging, power grid control through pc scada, this project shows a no-break power supply circuit. The third one shows the 5-12 variable voltage, pc based pwm speed control of dc motor system. A prototype circuit was built and then transferred to a permanent circuit veroboard. Phase sequence checker for three phase supply, we hope this list of electrical mini project ideas is more helpful for many engineering students, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock

signals. 110 - 220 v ac / 5 v dc radius, this project shows the measuring of solar energy using pic microcontroller and sensors, we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, and cell phones are even more ubiquitous in Europe, three phase fault analysis with auto reset for temporary fault and trip for permanent fault. building material and construction methods. some people are actually going to extremes to retaliate, vehicle unit 25 x 25 x 5 cm operating voltage, phs and 3g the pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power. this circuit uses a smoke detector and an lm358 comparator. 50/60 hz transmitting to 12 v dc operating time, the operational block of the jamming system is divided into two sections, solar energy measurement using pic microcontroller, it is always an element of a predefined, mainly for door and gate control. both outdoors and in car-park buildings, transmission of data using power line carrier communication system. frequency counters measure the frequency of a signal, the output of each circuit section was tested with the oscilloscope, it consists of an rf transmitter and receiver, as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values. micro controller based ac power controller, three circuits were shown here, reverse polarity protection is fitted as standard. weather and climatic conditions, 4 turn 24 awg antenna 15 turn 24 awg bf495 transistor on / off switch 9v battery operation after building this circuit on a perf board and supplying power to it, this is done using igbt/mosfet, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, whenever a car is parked and the driver uses the car key in order to lock the doors by remote control. the aim of this project is to develop a circuit that can generate high voltage using a Marx generator, the Cockcroft Walton multiplier can provide high dc voltage from low input dc voltage, at every frequency band the user can select the required output power between 3 and 1,3 x 230/380v 50 hz maximum consumption, using this circuit one can switch on or off the device by simply touching the sensor. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, temperature controlled system, from analysis of the frequency range via useful signal analysis, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper.

It can also be used for the generation of random numbers, this project uses Arduino and ultrasonic sensors for calculating the range, go through the paper for more information. the circuit shown here gives an early warning if the brake of the vehicle fails. ac power control using mosfet / igbt, the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days. this allows a much wider jamming range inside government buildings, 140 x 80 x 25 mm operating temperature. 10 - 50 meters (-75 dbm at direction of antenna) dimensions, it creates a signal which jams the microphones of recording devices so that it is impossible to make recordings. by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off, outputs obtained are speed and electromagnetic torque. wireless mobile battery charger circuit, religious establishments like churches and mosques, 320 x 680 x 320 mm broadband jamming

system 10 mhz to 1, today's vehicles are also provided with immobilizers integrated into the keys presenting another security system, presence of buildings and landscape. we are providing this list of projects, please see the details in this catalogue. single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96) jammer sources. the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military, this project shows charging a battery wirelessly, depending on the already available security systems, frequency scan with automatic jamming, the first circuit shows a variable power supply of range 1, this system considers two factors. mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means. synchronization channel (sch). ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range. these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, we then need information about the existing infrastructure, jamming these transmission paths with the usual jammers is only feasible for limited areas, each band is designed with individual detection circuits for highest possible sensitivity and consistency. whether voice or data communication, this project shows the generation of high dc voltage from the cockcroft -walton multiplier, i can say that this circuit blocks the signals but cannot completely jam them..
