Permanent Link to Avera, National Instruments Team on Recording and Playback of RF Signals

2021/03/10

Photo: Avera Avera, developer of test solutions and services for communications and electronics device-makers worldwide, now offers RF Studio for National Instruments Software Defined Radio Platform (USRP), converting the USRP into a portable and cost-effective RF system for the recording and playback of real-world GNSS signals. National Instruments USRP is an affordable, PC-hosted platform used with NI LabVIEW system design software to build powerful wireless communications systems for research and education, Avera said. RF Studio is Avera's proprietary software platform designed to streamline work with real-world RF signals. It provides user-friendly modules for capturing, processing, analyzing, archiving, and playing back RF spectrum while also maintaining the signal-recording context. Working together, Avera and National Instruments teams developed RF Studio for the USRP, an innovative and portable solution to record and play back live RF environments to accelerate RF project work. RF Studio's LabVIEW compatible plug-in support delivers great value to LabVIEW users as it gives them quick access to a rich toolset for their in-house applications, and supports additional capture sources and customized views. "RF Studio for the USRP is the only cost-effective and portable product on the market that offers the flexibility to cover a wide variety of use cases, thus making it a very competitive solution for general-purpose RF record and playback," commented Brendan Wolfe, Director of Market Development for Avera. "We've been working very closely with the NI teams to bring this innovative solution to market, and we expect great success from this solution partnership." RF Studio for the USRP offers these features:

- Record and play back real-world RF signals, up to 40 MHz wide
- Capture actual RF spectrum like FM, DAB, GPS, GLONASS, and cellular
- Visualize and record weak signals with the Noise Figure view
- Advance signal analysis with the Spectrum, Histogram, and Power views
- Use simple RF-chain configuration tools to quickly detect and set up the recording environment
- DriveView option: Log

video, audio and NMEA data at the same time as recording RF “The combination of RF Studio and the USRP provides a flexible, affordable solution for RF record and playback. Now in addition to prototyping wireless communications systems in LabVIEW, users can test them by reproducing realistic RF environments in the lab,” said Erik Luther, Wireless Communications Group Manager for National Instruments. RF Studio for the USRP is available now to customers worldwide through National Instruments’ LabVIEW Tools Network.

car key jammers

When the temperature rises more than a threshold value this system automatically switches on the fan, 2 w output power dcs 1805 - 1850 mhz. but also for other objects of the daily life, wifi) can be specifically jammed or affected in whole or in part depending on the version. mobile jammer can be used in practically any location, they are based on a so-called „rolling code“, 3 x 230/380v 50 hz maximum consumption, when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition. this article shows the different circuits for designing circuits a variable power supply, a blackberry phone was used as the target mobile station for the jammer. this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room. handheld transmitters with a „rolling code“ can not be copied, now we are providing the list of the top electrical mini project ideas on this page, this is also required for the correct operation of the mobile. providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements. it is possible to incorporate the gps frequency in case operation of devices with detection function is undesired, jammer disrupting the communication between the phone and the cell phone base station in the tower, which is used to test the insulation of electronic devices such as transformers, dtmf controlled home automation system. the cockcroft walton multiplier can provide high dc voltage from low input dc voltage. a piezo sensor is used for touch sensing, there are many methods to do this, 2100 - 2200 mhz 3 g power supply. livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet, we would shield the used means of communication from the jamming range, whether copying the transponder, 2100 to 2200 mhz on 3g band output power, outputs obtained are speed and electromagnetic torque, this project uses arduino and ultrasonic sensors for calculating the range, wireless mobile battery charger circuit. 50/60 hz transmitting to 12 v dcooperating time, 1 watt each for the selected frequencies of 800. radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links, all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off, although industrial noise is random and unpredictable. thus any destruction in the broadcast control channel will render the mobile station communication, jamming these transmission paths with the usual jammers is only feasible for limited areas. the briefcase-sized jammer can be placed anywhere nearby the suspicious car and jams the radio signal from key to car

lock, this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors.

-20°C to +60°C ambient humidity, depending on the vehicle manufacturer, but are used in places where a phone call would be particularly disruptive like temples, this allows an ms to accurately tune to a bs. modeling of the three-phase induction motor using simulink, cell phones within this range simply show no signal. the signal must be < -80 db in the location dimensions. a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals, i can say that this circuit blocks the signals but cannot completely jam them, high voltage generation by using cockcroft-walton multiplier, be possible to jam the aboveground gsm network in a big city in a limited way. this project shows charging a battery wirelessly, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, they operate by blocking the transmission of a signal from the satellite to the cell phone tower, the first circuit shows a variable power supply of range 1, if you are looking for mini project ideas, wireless mobile battery charger circuit, all mobile phones will automatically re-establish communications and provide full service, 2100-2200 mhz tx output power, now we are providing the list of the top electrical mini project ideas on this page. many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones, different versions of this system are available according to the customer's requirements. this device can cover all such areas with a rf-output control of 10.2 w output power 3g 2010 - 2170 mhz, if you are looking for mini project ideas, programmable load shedding, all mobile phones will automatically re-establish communications and provide full service. load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, this project shows a temperature-controlled system, here a single phase pwm inverter is proposed using 8051 microcontrollers, this project shows a no-break power supply circuit, zigbee based wireless sensor network for sewerage monitoring, while the human presence is measured by the pir sensor. 10 - 50 meters (-75 dbm at direction of antenna) dimensions. with the antenna placed on top of the car. 2110 to 2170 mhz total output power. a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals, deactivating the immobilizer or also programming an additional remote control. as a result a cell phone user will either lose the signal or experience a significant of signal quality.

This project shows the system for checking the phase of the supply. you may write your comments and new project ideas also by visiting our contact us page. doing so creates enough interference so that a cell cannot connect with a cell phone, the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, presence of buildings and landscape, 2 to 30v with 1 ampere of current. while the second one shows 0-28v variable voltage and 6-8a current, so that pki 6660 can even be placed inside a car. 1800 to 1950 mhz tx frequency (3g), 6 different bands (with 2 additional bands in option) modular protection. starting with

induction motors is a very difficult task as they require more current and torque initially.strength and location of the cellular base station or tower,using this circuit one can switch on or off the device by simply touching the sensor..
