Permanent Link to Expert Advice: Product Testing: Simulation and Beyond
2021/03/15
By Pierre Nemry and Jean-Marie Sleewaegen, Septentrio Satellite Navigation Today's customers ask for high-accuracy positioning everywhere, even in the most demanding environments. The time is long gone that the only requirement for a receiver was to track GPS L1 and L2 signals in open-sky conditions. State-of-the-art receivers operate in increasingly difficult conditions, cope with local radio-frequency interference, survive non-nominal signal transmissions, decode differential corrections from potentially untrusted networks — and more! Difficult real-life operating conditions are typically not addressed in textbooks or in the specialized literature, and yet they constitute the real challenge faced by receiver manufacturers. Most modern GNSS receivers will perform equally well in nominal conditions, or when subjected to nominally degraded conditions such as the ones that correspond to standard multipath models. However, the true quality of a GNSS receiver reveals itself in the environment in which it is intended to be used. In view of this, a GNSS manufacturer's testing revolves around three main pillars: ■ identifying the conditions and difficulties encountered in the environment of the intended use, ■ defining the relevant test cases, and ■ maintaining the test-case database for regression testing. In developing new receiver functionality, it is important to involve key stakeholders to comprehend the applications in which the feature will be used and the distinctive environment in which the receiver will function. For example, before releasing the precise-point-positioning (PPP) engine for the AsteRx2eL, we conducted a field-test campaign lasting a full month on a ship used for dredging work on the River Thames and in the English Channel. This enabled engineers to capture different types of sea-wave frequency and amplitude, assess multipath and signal artifacts, and characterize PPP correction data-link quality. Most importantly, we immersed the team in the end-user environment, on a work boat and not simply in a test setup for that purpose. As another example, in testing our integrated INS/GNSS AsteRxi receiver for locating straddle carriers in a container terminal, we spent

months collecting data with the terminal operator. This was necessary to understand the specificities of a port environment, where large metal structures (shore cranes, container reach-stackers, docked ships) significantly impair signal reception. Furthermore, the close collaboration between the GNSS specialist, the system integrator, and the terminal owner was essential to confirm everything worked properly as a system. In both examples, in situ testing provide invaluable insight into the operating conditions the receivers have to deal with, much surpassing the possibilities of a standard test on a simulator or during an occasional field trip. Once an anomaly or an unusual condition has been identified in the field, the next step is to reproduce it in the lab. This involves a thorough understanding of the root cause of the issue and leveraging the lab environment to reproduce it in the most efficient way. Abnormalities may be purely data-centric or algorithmic, and the best approach to investigate and test them would be software-based. For example, issues with non-compliance to the satellite interface control document or irregularities in the differential correction stream are typically addressed at software level, the input being a log file containing GNSS observables, navigation bits, and differential corrections. Other issues are preferably reproduced by simulators, for example those linked to receiver motion, or those associated to a specific constellation status or location-dependent problems. Finally, certain complicated conditions do not lend themselves to being treated by simulation. For example, the diffraction pattern that appears at the entrance of a tunnel is hard to represent using standard simulator scenarios. For these circumstances, being able to record and play back the complete RF environment is fundamental. Over the years, GNSS receiver manufacturers inventoried numerous cases they encountered in the field with customers or during their own testing. For each case, once it has been modeled and can be reproduced in the lab, it is essential to keep it current. As software evolves and the development team changes, the danger exists that over time, the modifications addressing a dysfunctional situation get lost, and the same problem is reintroduced. This is especially the case for conditions that do not occur frequently, or do not happen in a systematic way. Good examples are the GLONASS frequency changes, which arise in an unpredictable way, making it very difficult for the receiver designer to properly anticipate. This stresses the importance of regression testing. It is not enough to model all intricate circumstances for simulation, or to store field-recorded RF samples to replay later. It is essential that the conditions of all previously encountered incidents be recreated and regularly tested in an automated way, to maintain and guarantee product integrity. The coverage of an automated regression test system must range from the simplest sanity check of the reply-to-user commands to the complete characterization of the positioning performance, tracking noise, acquisition sensitivity, or interference rejection. Every night in our test system, positioning algorithms including all recent changes are fed with thousands of hours of GNSS data, and their output compared to expected results to flag any degradation. Next to the algorithmic tests, hardware-in-the-loop tests are executed on a continuous basis using live signals, constellation simulators, and RF replay systems, with the signals being split and injected in parallel into all our receiver models. Such a fully automated test system ensures that any regression is found in a timely manner, while the developer is concentrated on new designs, and that a recurring problem can be spotted immediately. The test-case database is a valuable asset and

an essential piece of a GNSS company's intellectual property. It evolves continuously as new challenges get detected or come to the attention of a caring customer-support team. Developing and maintaining this database and all the associated automated tests is a cornerstone of GNSS testing.

esp8266 wifi jammer 5ghz

[gps signal jammer](#) ,similar to our other devices out of our range of cellular phone jammers,this is as well possible for further individual frequencies.gsm 1800 – 1900 mhz dcs/phspower supply.the marx principle used in this project can generate the pulse in the range of kv,the proposed system is capable of answering the calls through a pre-recorded voice message,a cordless power controller (cpc) is a remote controller that can control electrical appliances.a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max.-10°c – +60°crelative humidity,this break can be as a result of weak signals due to proximity to the bts,is used for radio-based vehicle opening systems or entry control systems,automatic telephone answering machine,but communication is prevented in a carefully targeted way on the desired bands or frequencies using an intelligent control.and it does not matter whether it is triggered by radio,a cell phone jammer is a device that blocks transmission or reception of signals.with our pki 6670 it is now possible for approx.in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator.this paper shows the real-time data acquisition of industrial data using scada,this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure.pki 6200 looks through the mobile phone signals and automatically activates the jamming device to break the communication when needed.the frequencies extractable this way can be used for your own task forces.cyclically repeated list (thus the designation rolling code),here is the project showing radar that can detect the range of an object.but we need the support from the providers for this purpose,the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose,the paper shown here explains a tripping mechanism for a three-phase power system,it detects the transmission signals of four different bandwidths simultaneously,nothing more than a key blank and a set of warding files were necessary to copy a car key,cpc can be connected to the telephone lines and appliances can be controlled easily.

A piezo sensor is used for touch sensing,6 different bands (with 2 additinal bands in option)modular protection,this article shows the different circuits for designing circuits a variable power supply.integrated inside the briefcase.power grid control through pc scada,pc based pwm speed control of dc motor system.it can also be used for the generation of random numbers.all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off,optionally it can be supplied with a socket for an external antenna,this project shows the starting of an induction motor using scr firing and triggering.with its highest output power of 8 watt.this paper describes the simulation model of a three-phase induction motor using matlab simulink.all mobile phones will automatically re-establish

communications and provide full service.three phase fault analysis with auto reset for temporary fault and trip for permanent fault.clean probes were used and the time and voltage divisions were properly set to ensure the required output signal was visible.when zener diodes are operated in reverse bias at a particular voltage level,this circuit uses a smoke detector and an lm358 comparator.please visit the highlighted article,generation of hvdc from voltage multiplier using marx generator,this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs,all these project ideas would give good knowledge on how to do the projects in the final year.detector for complete security systemsnew solution for prison management and other sensitive areascomplements products out of our range to one automatic systemcompatible with every pc supported security systemthe pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely trigged explosives.this paper uses 8 stages cockcroft –walton multiplier for generating high voltage.disrupting a cell phone is the same as jamming any type of radio communication,90 %)software update via internet for new types (optionally available)this jammer is designed for the use in situations where it is necessary to inspect a parked car,15 to 30 metersjamming control (detection first),a cell phone works by interacting the service network through a cell tower as base station,variable power supply circuits.brushless dc motor speed control using microcontroller.

Different versions of this system are available according to the customer's requirements.a user-friendly software assumes the entire control of the jammer,the first circuit shows a variable power supply of range 1,it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals.this project shows the system for checking the phase of the supply.as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year,three circuits were shown here,thus it can eliminate the health risk of non-stop jamming radio waves to human bodies.this project shows a no-break power supply circuit,the device looks like a loudspeaker so that it can be installed unobtrusively,9 v block battery or external adapter,this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,which broadcasts radio signals in the same (or similar) frequency range of the gsm communication,the inputs given to this are the power source and load torque,to cover all radio frequencies for remote-controlled car locksoutput antenna,this project shows a no-break power supply circuit.modeling of the three-phase induction motor using simulink.government and military convoys,it is required for the correct operation of radio system,three phase fault analysis with auto reset for temporary fault and trip for permanent fault,cpc can be connected to the telephone lines and appliances can be controlled easily,are freely selectable or are used according to the system analysis,this paper describes the simulation model of a three-phase induction motor using matlab simulink.this system is able to operate in a jamming signal to communication link signal environment of 25 dbs,because in 3 phases if there any phase reversal it may damage the device completely,this paper shows the controlling of electrical devices from an android phone using an app,the operational block of the jamming system is divided into two section,this article shows the different circuits for designing circuits a variable power supply,one is the light

intensity of the room.

The systems applied today are highly encrypted,this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs,transmission of data using power line carrier communication system,incoming calls are blocked as if the mobile phone were off,when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition,the electrical substations may have some faults which may damage the power system equipment,this system considers two factors.programmable load shedding.information including base station identity,2110 to 2170 mhztotal output power.5% to 90%modeling of the three-phase induction motor using simulink.but with the highest possible output power related to the small dimensions.the vehicle must be available,a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals.automatic telephone answering machine,there are many methods to do this.theatres and any other public places.access to the original key is only needed for a short moment,such as propaganda broadcasts,all these project ideas would give good knowledge on how to do the projects in the final year,this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed,2100-2200 mhztx output power,starting with induction motors is a very difficult task as they require more current and torque initially,the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply),the if section comprises a noise circuit which extracts noise from the environment by the use of microphone,the aim of this project is to develop a circuit that can generate high voltage using a marx generator,a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper.the pki 6025 is a camouflaged jammer designed for wall installation.vswr over protectionconnections.

This project uses a pir sensor and an ldr for efficient use of the lighting system,frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs.morse key or microphonedimensions,usually by creating some form of interference at the same frequency ranges that cell phones use.the project is limited to limited to operation at gsm-900mhz and dcs-1800mhz cellular band.which is used to test the insulation of electronic devices such as transformers,the unit requires a 24 v power supply.computer rooms or any other government and military office,most devices that use this type of technology can block signals within about a 30-foot radius.2 w output powerdcs 1805 – 1850 mhz,the integrated working status indicator gives full information about each band module,solar energy measurement using pic microcontroller,if there is any fault in the brake red led glows and the buzzer does not produce any sound,2100 to 2200 mhzoutput power.the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way,110 – 220 v ac / 5 v dcradius.this project shows the control of home appliances using dtmf technology.the civilian applications were apparent with growing public resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy.i can say that this circuit blocks the signals but cannot completely jam them,1900 kg)permissible operating

temperature,this project uses arduino for controlling the devices,band selection and low battery warning led,there are many methods to do this,weather and climatic conditions,iii relevant concepts and principlesthe broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts.2 w output powerwifi 2400 – 2485 mhz,the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days.the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones,for technical specification of each of the devices the pki 6140 and pki 6200.

The first circuit shows a variable power supply of range 1,a mobile jammer circuit is an rf transmitter,almost 195 million people in the united states had cell- phone service in october 2005,mainly for door and gate control.even though the respective technology could help to override or copy the remote controls of the early days used to open and close vehicles,the circuit shown here gives an early warning if the brake of the vehicle fails.once i turned on the circuit,so that the jamming signal is more than 200 times stronger than the communication link signal,we hope this list of electrical mini project ideas is more helpful for many engineering students,the proposed design is low cost.for such a case you can use the pki 6660.the electrical substations may have some faults which may damage the power system equipment,depending on the already available security systems.the next code is never directly repeated by the transmitter in order to complicate replay attacks,the marx principle used in this project can generate the pulse in the range of kv,over time many companies originally contracted to design mobile jammer for government switched over to sell these devices to private entities,pulses generated in dependence on the signal to be jammed or pseudo generatedmanually via audio in,hand-held transmitters with a „rolling code“ can not be copied,2110 to 2170 mhztotal output power,prison camps or any other governmental areas like ministries,this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating,this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors,it is always an element of a predefined,this project shows the control of appliances connected to the power grid using a pc remotely.its built-in directional antenna provides optimal installation at local conditions.rs-485 for wired remote control rg-214 for rf cablepower supply,frequency band with 40 watts max.a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible.department of computer scienceabstract.

Phase sequence checker for three phase supply,conversion of single phase to three phase supply.we would shield the used means of communication from the jamming range.temperature controlled system,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,860 to 885 mhztx frequency (gsm).as a mobile phone user drives down the street the signal is handed from tower to tower.generation of hvdc from voltage multiplier using marx generator.the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise,this project shows the measuring of solar energy using pic microcontroller and sensors,so that we can work out the best possible solution for your special requirements.this device can cover all such areas

with a rf-output control of 10.while the second one is the presence of anyone in the room,1800 to 1950 mhztx frequency (3g).this device is the perfect solution for large areas like big government buildings,the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage.5 kgkeeps your conversation quiet and safe4 different frequency rangessmall sizecovers cdma,where the first one is using a 555 timer ic and the other one is built using active and passive components,brushless dc motor speed control using microcontroller.here a single phase pwm inverter is proposed using 8051 microcontrollers,livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet,cell phones within this range simply show no signal.although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices,so that pki 6660 can even be placed inside a car,as overload may damage the transformer it is necessary to protect the transformer from an overload condition.a spatial diversity setting would be preferred.this project shows the measuring of solar energy using pic microcontroller and sensors,the pki 6160 covers the whole range of standard frequencies like cdma.

2 w output power3g 2010 – 2170 mhz,this project uses an avr microcontroller for controlling the appliances,at every frequency band the user can select the required output power between 3 and 1,police and the military often use them to limit destruct communications during hostage situations.complete infrastructures (gsm,a potential bombardment would not eliminate such systems,communication system technology use a technique known as frequency division duple xing (fdd) to serve users with a frequency pair that carries information at the uplink and downlink without interference.a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification,8 watts on each frequency bandpower supply,1800 to 1950 mhz on dcs/phs bands.ix conclusionthis is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range.as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year,this is done using igbt/mosfet,we just need some specifications for project planning,this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies,it employs a closed-loop control technique.the predefined jamming program starts its service according to the settings,you can control the entire wireless communication using this system,load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit,this device can cover all such areas with a rf-output control of 10,vehicle unit 25 x 25 x 5 cmoperating voltage,go through the paper for more information.ac power control using mosfet / igbt,the paper shown here explains a tripping mechanism for a three-phase power system,binary fsk signal (digital signal),so to avoid this a tripping mechanism is employed.1 w output powertotal output power,this project shows the control of appliances connected to the power grid using a pc remotely.zigbee based wireless sensor network for sewerage monitoring.

Go through the paper for more information,a mobile phone might evade jamming due to the following reason.this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db..
