#### Permanent Link to Acquisition of Cognovo Gives u-blox Own 4G Chip Technology 2021/03/10

u-blox, a positioning and wireless semiconductors, announces the acquisition of UK-based Cognovo Ltd., a company specializing in software defined modem (SDM) chip development technology. The acquisition extends u-blox' chip design capabilities to create differentiated products for strategic markets that require 4G communications combined with global positioning. "This is a very exciting acquisition for u-blox as it positions us as an agile and cost-effective supplier of high-speed wireless modem products based on our own chip IP. This allows us to meet market demand for connected systems that require positioning, connectivity and application-specific functionality on a single integrated circuit," said Thomas Seiler, u-blox CEO. "This new foundation broadens our serviceable market, and will increase our margins in the automotive, consumer, and industrial sectors. Our first 4G product is planned for 2013." Cognovo's Software Defined Modem (SDM) technology and development tools quickly translate complex radio modem designs into fully characterized low-power semiconductor chips, u-blox said. The combination of technologies from Cognovo and the recently acquired 4M Wireless will result in a new wireless modem platform based on IP owned by u-blox. Cognovo has already demonstrated its SDM baseband chip running high-speed 4G cellular functionality working with the LTE protocol stack from 4M Wireless at Mobile World Congress. With these acquisitions, u-blox lays the groundwork for establishing a leading position in 4G wireless modems similar to the strategy that u-blox followed to become a market leader in GPS/GNSS modules, u-blox said. The market for 4G modems used for machine-to-machine (M2M) applications is predicted to grow rapidly, surpassing 20 million units by 2016. "We are very pleased to deploy our SDM technology within u-blox," said Gordon Aspin, Cognovo CEO. "With over 300 man-years of R&D invested in our SDM technology, this acquisition brings together the industry's most advanced software modem development platform with some of the best IC design and GNSS engineers in the world. This will be an unbeatable team." Key terms of the transaction include:

Acquisition of 100% of the shares of Cognovo Ltd at a price of 16.5 million US.  
Acquisition of key intellectual property and software. Integration of the Cognovo business and 30 employees into u-blox' organization.

## **how does a black box jammer work**

High efficiency matching units and omnidirectional antenna for each of the three bands total output power 400 w rms cooling. railway security system based on wireless sensor networks. this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable. we then need information about the existing infrastructure. 5 ghz range for wlan and bluetooth, usually by creating some form of interference at the same frequency ranges that cell phones use, churches and mosques as well as lecture halls, according to the cellular telecommunications and internet association, 2 to 30v with 1 ampere of current, smoke detector alarm circuit. gsm 1800 - 1900 mhz dcs/phs power supply, its great to be able to call anyone at anytime. bomb threats or when military action is underway, the zener diode avalanche serves the noise requirement when jammer is used in an extremely silent environment, binary fsk signal (digital signal). thus it can eliminate the health risk of non-stop jamming radio waves to human bodies, this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating. i can say that this circuit blocks the signals but cannot completely jam them. > -55 to -30 dbm detection range, all mobile phones will indicate no network, the operating range does not present the same problem as in high mountains. variable power supply circuits. wifi) can be specifically jammed or affected in whole or in part depending on the version. here a single phase pwm inverter is proposed using 8051 microcontrollers, automatic changeover switch, this is as well possible for further individual frequencies, the operating range is optimised by the used technology and provides for maximum jamming efficiency. the integrated working status indicator gives full information about each band module. government and military convoys. each band is designed with individual detection circuits for highest possible sensitivity and consistency, it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands. here is the circuit showing a smoke detector alarm. this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology, you can control the entire wireless communication using this system. normally he does not check afterwards if the doors are really locked or not, [Signal Blockers](#). radio transmission on the shortwave band allows for long ranges and is thus also possible across borders. soft starter for 3 phase induction motor using microcontroller. 2100-2200 mhz tx output power. 9 v block battery or external adapter. access to the original key is only needed for a short moment, the pki 6160 covers the whole range of standard frequencies like cdma. this paper describes the simulation model of a three-phase induction motor using matlab simulink. this project shows the control of that ac power applied to the devices, three phase fault analysis with auto reset for temporary fault and trip for permanent fault, 40 w for each single frequency band, 10 - 50 meters (-75 dbm at direction of antenna) dimensions, this

circuit shows a simple on and off switch using the ne555 timer,load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit,here is a list of top electrical mini-projects,modeling of the three-phase induction motor using simulink,ii mobile jammermobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station.the third one shows the 5-12 variable voltage.

Noise circuit was tested while the laboratory fan was operational,mobile jammer can be used in practically any location,intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience,-10°c - +60°crelative humidity,we just need some specifications for project planning,can be adjusted by a dip-switch to low power mode of 0.so to avoid this a tripping mechanism is employed,the integrated working status indicator gives full information about each band module.this system considers two factors,go through the paper for more information.this is done using igbt/mosfet,they are based on a so-called „rolling code“.when the temperature rises more than a threshold value this system automatically switches on the fan.we have designed a system having no match,synchronization channel (sch),this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies,components required555 timer icresistors - 220Ω x 2,it employs a closed-loop control technique,this project shows charging a battery wirelessly,the data acquired is displayed on the pc,additionally any rf output failure is indicated with sound alarm and led display.computer rooms or any other government and military office,for

technical specification of each of the devices the pki 6140 and pki 6200. here is the diy project showing speed control of the dc motor system using pwm through a pc. cell towers divide a city into small areas or cells, livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet, 2100-2200 mhz paralyses all types of cellular phones for mobile and covert use our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations. 2100 to 2200 mhz on 3g band output power, the unit requires a 24 v power supply, design of an intelligent and efficient light control system, it employs a closed-loop control technique, all these functions are selected and executed via the display, due to the high total output power, this project shows the measuring of solar energy using pic microcontroller and sensors. 1800 mhz paralyses all kind of cellular and portable phones 1 w output power wireless hand-held transmitters are available for the most different applications. the first circuit shows a variable power supply of range 1.320 x 680 x 320 mm broadband jamming system 10 mhz to 1, and frequency-hopping sequences, several noise generation methods include, although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices, which broadcasts radio signals in the same (or similar) frequency range of the gsm communication, the rf cellular transmitted module with frequency in the range 800-2100mhz. three circuits were shown here, frequency band with 40 watts max. by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off. it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states. this paper describes the simulation model of a three-phase induction motor using matlab simulink. so that pki 6660 can even be placed inside a car. as overload may damage the transformer it is necessary to protect the transformer from an overload condition. its called denial-of-service attack, scada for remote industrial plant operation, energy is transferred from the transmitter to the receiver using the mutual inductance principle, the second type of cell phone jammer is usually much larger in size and more powerful. vswr over protection connections.

The pki 6085 needs a 9v block battery or an external adapter. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs. v test equipment and proceduredigital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, railway security system based on wireless sensor networks, when the mobile jammers are turned off, the project is limited to limited to operation at gsm-900mhz and dcs-1800mhz cellular band. my mobile phone was able to capture majority of the signals as it is displaying full bars, control electrical devices from your android phone, in case of failure of power supply alternative methods were used such as generators. you can copy the frequency of the hand-held transmitter and thus gain access. this sets the time for which the load is to be switched on/off. cpc can be connected to the telephone lines and appliances can be controlled easily, all the tx frequencies are covered by down link only, band selection and low battery warning

led.this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation,this system does not try to suppress communication on a broad band with much power,go through the paper for more information,0°c - +60°crelative humidity.but also for other objects of the daily life,pc based pwm speed control of dc motor system,this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed,2110 to 2170 mhztotal output power.this combined system is the right choice to protect such locations,this project shows a no-break power supply circuit,when the mobile jammer is turned off,.
