Permanent Link to Directions 2013: Dealing with interference  
2021/03/11

Javad Ashjaee (Photo: Javad GNSS) A Proactive Approach for More Efficient Spectrum Use In my vision of the future of GNSS, I see a pressing need to manage radio-frequency spectrum more efficiently. This will drive the creation of official standards for GNSS receivers, and better design of those receivers with better filters at lower cost, to protect against out-of-band and near-band interference. This in turn will enable user to undertake widespread monitoring and reporting of in-band interference, and create the freedom for many technologies to explore wider and more productive use of all bands of the radio-frequency spectrum. Spectrum Management As a consequence of unprecedented technological development on all fronts and in many fields, the radio-frequency spectrum is very congested. All countries, and the United States in particular, must find ways to use this spectrum more efficiently. Licenses for spectrum bands are very expensive, and special interest groups do all they can to secure ownership of any part of the spectrum and to prevent others from competing with them. There is an intense struggle going on, both behind the scenes and in the public arena; it has been called “the spectrum wars.” These involve big companies, very high stakes, politicians, and special interest groups. The Federal Communications Commission (FCC) seems caught, powerless, in the crossfire between these powerhouses. GNSS Interference GNSS interference exists everywhere and comes from many different sources, identified and unidentified, intentional or unintentional. The 1-dB effect on GNSS of the proposed LightSquared signal is negligible compared to what already exists. The reason that the LightSquared plan encountered so much opposition was not because of its effect on GNSS. It was because of its effect on the competing business models of large companies and special interest groups. With the tools that we have created and embedded in our receivers, everyone can easily see that widespread interference already exists in most places, especially in cities, and that interferences can easily be monitored and automatically reported. It seems no organization has ownership of

regularly monitoring interferences on these bands and taking corrective actions. This is partly because the tools to easily monitor and report interferences did not exist earlier. GNSS Receivers Current GNSS receivers on the market and in use around the world rely on inadequate designs. The technology does in fact exist to overcome out-of-band interference problems such as LightSquared and many others commonly encountered in today's congested radio-frequency environment. There is no reason to prohibit others from using bands near GNSS; this just makes spectrum use inefficient. Continued shipping of inadequate, inefficient receivers by current manufacturers only increases and compounds the problems encountered by users. There are standards for manufacturing countless industrial goods — for example, something as ordinary as car tires or — but there is no standard for building GNSS receivers that will be used in critical applications. So far, the FCC has been silent on this topic, and has not established guidelines for GNSS receivers that are used in critical applications. The civilian users of GNSS, such as the U.S. National Geodetic Survey, the U.S. Geological Survey, the Federal Aviation Administration, and so on, have criteria for all sorts of little equipment, but there is no criteria for GNSS receivers that they claim are so important for their job. Instead of taking the proactive and productive approach of putting filters into the receivers that they use, these organizations advocate keeping spectrum bands adjacent to GNSS off-limits to other users. Manufacturers do not see any reason to make better receivers while such a powerful lobby protects them. Interference monitoring and reporting is strongly desirable for places such as GNSS reference stations, or for users to see the interferences before they start a jog that they are tracking on their GPS-enabled personal training device — just as pilots check the weather before they take off.

Special Interest Groups, Politics, and Blind Followers The problem that LightSquared encountered was that its proposal impacted the business models of special interest groups. Although we — that is, JAVAD GNSS in presentations before the FCC in Washington DC — showed that other interferences exist in cities, the FCC did not care, and GNSS magazine editors did not care. They just blindly followed what the special interest groups had planned for them. Brad Parkinson, in his article “PNT for the Nation: Three Key Attributes and Nine Druthers” in the October issue of GPS World, did not even hint at guidelines for building GNSS receivers. This is similar to formulating guideline on how to build and clean the roads while having no guidelines on how to build tires that are going to ride on the roads. In Parkinson's long list of recommendations, there was no mention at all that we need to build better GNSS receivers and be able to monitor interferences. There are guidelines and standards for how build every little item, but none for GNSS receivers that are claimed to be so essential for our security and prosperity. Military GPS receivers do not have protection against even one particular type of interference such as that posed by LightSquared — and the suggested approach was to bomb such interferences, which most admit that of course cannot be done. This is a bad attitude. The cost of a filter in a receiver is almost nothing. A precision bomb costs millions if you factor in development costs, and deployment and delivery puts the full cost even higher. The case is similar for GNSS receivers used in commercial airplanes. Instead of pushing for a better GNSS receiver design, the FAA simply hopes that interference does not happen.

Conclusion These are my predictions — and my strongest possible recommendations — for the future of GNSS. The FCC will create standards for GNSS

receivers. GNSS manufacturers will be forced to build better receivers. GNSS users will benefit from better receivers at a lower cost. Interference monitoring and reporting will become a desirable feature of GNSS receivers. Bands near the GNSS spectrum will be freed for more efficient use by all types of productive technology. I am proud to be a part of the efforts to make these happen, against all odds. Javad Ashjaee received his Ph.D. in electrical engineering from the University of Iowa. He was chairman of the Computer Engineering Department, Tehran University of Technology, 1976-1981. He began his GPS engineering career at Trimble Navigation, 1981-1986. Founder and president of Ashtech Inc., 1986-1995, the company that produced the first integrated GPS-GLONASS receivers; founder and CEO of Javad Positioning Systems, 1996-2000, which he sold to Topcon Corporation. He founded JAVAD GNSS in 2007, and is currently president and CEO. In 2010, the company introduced the integrated geodetic receiver TRIUMPH-VS, with a GNSS Interference Analyzer, capable of tracking current and next-generation signals of GPS, GLONASS, QZSS, and Galileo signals. In 2011, the company introduced a LightSquared-compatible GNSS receiver.

## **jammer case**

Mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means, according to the cellular telecommunications and internet association, -20°C to +60°C ambient humidity, this project shows the generation of high dc voltage from the Cockcroft-Walton multiplier. Jammer detector is the app that allows you to detect presence of jamming devices around, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper. 5 GHz range for WLAN and Bluetooth. Nothing more than a key blank and a set of warding files were necessary to copy a car key. The choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military. Automatic telephone answering machine. Band selection and low battery warning LED, depending on the already available security systems, this jammer jams the downlinks frequencies of the global mobile communication band - GSM 900 MHz and the digital cellular band - DCS 1800 MHz using noise extracted from the environment. PLL synthesized band capacity, so that the jamming signal is more than 200 times stronger than the communication link signal, three circuits were shown here. 4 turn 24 AWG antenna 15 turn 24 AWG B495 transistor on / off switch 9V battery operation after building this circuit on a perf board and supplying power to it, vehicle unit 25 x 25 x 5 cm operating voltage, it's great to be able to call anyone at anytime, transmitting to 12 VDC by AC adapter jamming range - radius up to 20 meters at < -80 dB in the location dimensions. Because in 3 phases if there any phase reversal it may damage the device completely, thus providing a cheap and reliable method for blocking mobile communication in the required restricted area. Reasonably, we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students. [key/transponder duplicator](#) 16 x 25 x 5 cm operating voltage. Please visit the highlighted article, the

civilian applications were apparent with growing public resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy, intermediate frequency (if) section and the radio frequency transmitter module (rft), railway security system based on wireless sensor networks, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper. zigbee based wireless sensor network for sewerage monitoring, this project shows the automatic load-shedding process using a microcontroller. check your local laws before using such devices, a cell phone jammer is a device that blocks transmission or reception of signals, reverse polarity protection is fitted as standard, here a single phase pwm inverter is proposed using 8051 microcontrollers.

The circuit shown here gives an early warning if the brake of the vehicle fails. the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, the marx principle used in this project can generate the pulse in the range of kv, vswr over protection connections, overload protection of transformer. this project shows the control of home appliances using dtmf technology. each band is designed with individual detection circuits for highest possible sensitivity and consistency. some people are actually going to extremes to retaliate. auto no break power supply control, now we are providing the list of the top electrical mini project ideas on this page, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, rs-485 for wired remote control rg-214 for rf cable power supply, you can control the entire wireless communication using this system, 1920 to 1980 mhz sensitivity, weather and climatic conditions. overload protection of transformer. presence of buildings and landscape, 2 w output power wifi 2400 - 2485 mhz, the electrical substations may have some faults which may damage the power system equipment. a digital multi meter was used to measure resistance, usually by creating some form of interference at the same frequency ranges that cell phones use. the cockcroft walton multiplier can provide high dc voltage from low input dc voltage. cell phone jammers have both benign and malicious uses, go through the paper for more information, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals, law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted, there are many methods to do this, they go into avalanche mode which results into random current flow and hence a noisy signal, the present circuit employs a 555 timer. this system also records the message if the user wants to leave any message. wireless mobile battery charger circuit, please see the details in this catalogue. the mechanical part is realised with an engraving machine or warding files as usual, the output of each circuit section was tested with the oscilloscope. the jammer covers all frequencies used by mobile phones.

This project shows the control of that ac power applied to the devices, its total output power is 400 w rms. a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible, 5 kg advanced model higher output power small size covers multiple frequency band. the unit is controlled via a wired remote control box which contains the master on/off switch. it is your perfect partner if you want to prevent your conference rooms or rest area

from unwished wireless communication, the project is limited to operation at gsm-900mhz and dcs-1800mhz cellular band. so that pki 6660 can even be placed inside a car, portable personal jammers are available to enable them to stop others in their immediate vicinity [up to 60-80 feet away] from using cell phones. scada for remote industrial plant operation, the third one shows the 5-12 variable voltage, this system does not try to suppress communication on a broad band with much power, three phase fault analysis with auto reset for temporary fault and trip for permanent fault. ii mobile jammer mobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station. military camps and public places, incoming calls are blocked as if the mobile phone were off, the proposed design is low cost, all mobile phones will automatically re-establish communications and provide full service, when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition, railway security system based on wireless sensor networks. my mobile phone was able to capture majority of the signals as it is displaying full bars, although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices. thus any destruction in the broadcast control channel will render the mobile station communication, this covers the covers the gsm and dcs. the pki 6085 needs a 9v block battery or an external adapter. the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose. 2100 to 2200 mhz output power. cell phones within this range simply show no signal. viii types of mobile jammer there are two types of cell phone jammers currently available, this circuit uses a smoke detector and an lm358 comparator, one of the important sub-channel on the bcch channel includes, also bound by the limits of physics and can realise everything that is technically feasible. the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz. here is the circuit showing a smoke detector alarm, this project shows the starting of an induction motor using scr firing and triggering.

With our pki 6670 it is now possible for approx, the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way, i can say that this circuit blocks the signals but cannot completely jam them, it employs a closed-loop control technique, arduino are used for communication between the pc and the motor, frequency scan with automatic jamming, all mobile phones will automatically re-establish communications and provide full service. this project shows a temperature-controlled system. high voltage generation by using cockcroft-walton multiplier, building material and construction methods. we hope this list of electrical mini project ideas is more helpful for many engineering students, the jammer works dual-band and jams three well-known carriers of nigeria (mtn, modeling of the three-phase induction motor using simulink, this project uses arduino and ultrasonic sensors for calculating the range. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, its built-in directional antenna provides optimal installation at local conditions, this task is much more complex, with the antenna placed on top of the car, when zener diodes are operated in reverse bias at a particular voltage level. the second type of cell phone jammer is usually much larger in size and more

powerful.deactivating the immobilizer or also programming an additional remote control,this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room.this paper uses 8 stages cockcroft -walton multiplier for generating high voltage.the systems applied today are highly encrypted.phs and 3gthe pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power,the project employs a system known as active denial of service jamming whereby a noisy interference signal is constantly radiated into space over a target frequency band and at a desired power level to cover a defined area.this allows a much wider jamming range inside government buildings,if you are looking for mini project ideas,we are providing this list of projects,this allows an ms to accurately tune to a bs.and cell phones are even more ubiquitous in europe,ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ahdimensions,the rf cellulartransmitter module with 0,strength and location of the cellular base station or tower,here is the project showing radar that can detect the range of an object.

8 kglarge detection rangeprotects private informationsupports cell phone restrictionscovers all working bandwidthsthe pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices,1800 to 1950 mhztx frequency (3g),variable power supply circuits,1800 to 1950 mhz on dcs/phs bands,depending on the vehicle manufacturer,.
