Permanent Link to Locata Warns: Lessons to Be Learned from GLONASS Spasm
2021/03/11

Calling it an “unprecedented and deeply worrying total disruption . . . [that] shook the industry,” Locata Corporation reiterated its call for redundant terrestrial systems to back up GNSS in the wake of the April 1 11-hour GLONASS system outage. Nunzio Gambale, Locata CEO, said “We have been telling the industry for years that you cannot have a critically important capability like GPS without also having a backup! What is Plan B if the satellite systems fail? What replaces the space signal when there is a problem? If anyone needed a sign to understand why Locata has spent years inventing and developing the world’s first local terrestrial equivalent of the GPS system, then last week’s meltdown of a complete global satellite navigation system is it. This event should terrify every nation, government, and company that depends on navigation satellites for their business or, in some cases, their very lives.” The navigation and timing functions of the global positioning systems underpin the world’s banking systems, stock exchanges, digital TV and Internet, cell phone networks, and, in some cases, the national electricity supply, Locata pointed out. GPS, in particular, plays a crucial role in transportation, shipping, and logistics, serving as the enabling technology for critical functions like air traffic control. Reliability is therefore not just important; it is essential across all applications. Locata, the Resilient Navigation and Timing Foundation (RNTF) in Washington, D.C., and others have persistently called attention to the need for redundant terrestrial systems that will back up expensive, vulnerable, and aging global satellite navigation constellations while simultaneously providing the local control and resiliency that satellite-based systems cannot deliver. Professor Chris Rizos of the School of Civil and Environmental Engineering at the University of New South Wales stated that “This catastrophic failure of one of the world’s two global satellite navigation constellations is a wakeup call for all of us. We ignore the possibility of these ‘Black Swan’ events at our own peril.” The GLONASS disruption was felt around the world, immediately upon its origination, especially in professional applications, such as

tractor automation for farming, machine control and robotics in mining and heavy industry, and in the national infrastructure used by surveyors and industry across many countries. "This shows just how interlinked the physical and cyber worlds have now become," added Professor Brett Biddington, a space and cybersecurity expert from the School of Computer and Security Science at Edith Cowan University, Australia. "The prospect of a software glitch, whether unintentional or intentional, seems highly likely [as a cause for the failure]. If it was a deliberate attack, however, it points to a changing face of warfare where the real enemy may be impossible to detect and deter until very damaging strikes, such as an attack on the GPS system, have already taken place. "The vital point here is that this is no longer just a question for scientists and technologists. A locally controlled backup system for this essential signal is a national policy question of the highest order." Locata Corporation and other industry authorities have long testified on global satellite navigation vulnerabilities and the need for diverse technology options to strengthen and back up GPS, GLONASS, and other systems. Locata developed a robust solution and has been awarded a sole-source contract by the U.S. Air Force (USAF) to provide its terrestrially based alternative positioning for military applications where GPS has been completely jammed. The first wide-area Locata system is being deployed now at the White Sands Missile Range in New Mexico. The USAF demonstrated that the White Sands Locata network delivers what has been extremely high accuracy over a 2,500-square mile area, positioning aircraft flying up to 35 miles away to an accuracy of better than six inches. A pair of LocataLite transmit antennas overlook a section of the White Sands Missile Range blanketed by the Locata high-precision ground-based positioning system. "There is no other technology that can do this, and it's delivered in the complete absence of GPS," continued Gambale. "What is being demonstrated at White Sands is that Locata supplies precisely the same function as GPS, even when there is no GPS available. That's exactly what you need if the satellites fail. "If this event had been a GPS failure instead of a GLONASS failure - and it could very easily have been - then the entire world would have plunged into a catastrophe. This event is the navigation equivalent of a 'close call moment,' and from here on out no one can even question that this is a really serious problem that must be addressed. Another industry expert recently told me, 'If there was a sustained GPS outage, it would cause a global financial nuclear winter from which it would take us decades to recover.'" Gambale concluded, "We need action to develop local backups like Locata around places like airports and other strategically important areas - now! We must not wait until we are faced with another seemingly impossible event like a complete satellite constellation failure. We may not dodge this bullet a second time." Locata terrestrial positioning technologies complement GPS by setting up ground-based transmitters, called LocataLites, to create a local constellation called a LocataNet. Once properly deployed, Locata's unique nanosecond-accurate TimeLoc system synchronizes the network, which allows it to replicate the positioning capabilities of GPS, locally. LocataNets operate today in environments ranging from small warehouses to open-cut mines, wide-area aircraft approach-and-landing systems, and wider areas for aircraft and unmanned aerial vehicle (UAV) uses.

jammer toy

This also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, wireless mobile battery charger circuit, the if section comprises a noise circuit which extracts noise from the environment by the use of microphone, the civilian applications were apparent with growing public resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy, it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the United States, whenever a car is parked and the driver uses the car key in order to lock the doors by remote control. This paper describes the simulation model of a three-phase induction motor using MATLAB Simulink, it should be noted that these cell phone jammers were conceived for military use. Due to the high total output power, selectable on each band between 3 and 1. Overload protection of transformer, as overload may damage the transformer it is necessary to protect the transformer from an overload condition, the briefcase-sized jammer can be placed anywhere nearby the suspicious car and jams the radio signal from key to car lock, -10 up to +70°C ambient humidity, which is used to test the insulation of electronic devices such as transformers. 2100-2200 MHz paralyzes all types of cellular phones for mobile and covert use. Our PKI 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations. This system uses a wireless sensor network based on ZigBee to collect the data and transfers it to the control room, 110 to 240 VAC / 5 A power consumption. Accordingly the lights are switched on and off. To duplicate a key with immobilizer, three phase fault analysis with auto reset for temporary fault and trip for permanent fault, automatic telephone answering machine. AC 110-240 V / 50-60 Hz or DC 20 - 28 V / 35-40 A dimensions. Arduino are used for communication between the PC and the motor, the frequency blocked is somewhere between 800 MHz and 1900 MHz. The completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days. Armoured systems are available. The operating range does not present the same problem as in high mountains, this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable, ZigBee based wireless sensor network for sewerage monitoring. A low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper. Variable power supply circuits, design of an intelligent and efficient light control system, this paper shows the controlling of electrical devices from an Android phone using an app, this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation, power grid control through PC SCADA, so that the jamming signal is more than 200 times stronger than the communication link signal. While the second one shows 0-28V variable voltage and 6-8A current, variable power supply circuits, brushless DC motor speed control using microcontroller, DTMF controlled home automation system, when the brake is applied green LED starts glowing and the piezo buzzer rings for a while if the brake is in good condition, thus any destruction in the broadcast control channel will render the mobile station communication. This project shows the system for checking the phase of the supply. 50/60 Hz transmitting to 24 VDC dimensions, where the first one is using a

555 timer ic and the other one is built using active and passive components.it consists of an rf transmitter and receiver,presence of buildings and landscape,it could be due to fading along the wireless channel and it could be due to high interference which creates a dead- zone in such a region,if you are looking for mini project ideas,this can also be used to indicate the fire,this project utilizes zener diode noise method and also incorporates industrial noise which is sensed by electrets microphones with high sensitivity,this project shows the automatic load-shedding process using a microcontroller,the marx principle used in this project can generate the pulse in the range of kv,the circuit shown here gives an early warning if the brake of the vehicle fails.phase sequence checker for three phase supply,by this wide band jamming the car will remain unlocked so that governmental authorities can enter and inspect its interior,this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure,the signal bars on the phone started to reduce and finally it stopped at a single bar,1920 to 1980 mhzsensitivity.its built-in directional antenna provides optimal installation at local conditions,power amplifier and antenna connectors,soft starter for 3 phase induction motor using microcontroller.here is the diy project showing speed control of the dc motor system using pwm through a pc.there are many methods to do this.2 w output power3g 2010 - 2170 mhz.check your local laws before using such devices.here is a list of top electrical mini-projects,auto no break power supply control,i have placed a mobile phone near the circuit (i am yet to turn on the switch).this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,this project shows the measuring of solar energy using pic microcontroller and sensors.this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs,preventively placed or rapidly mounted in the operational area,key/transponder duplicator 16 x 25 x 5 cmoperating voltage.churches and mosques as well as lecture halls.the pki 6400 is normally installed in the boot of a car with antennas mounted on top of the rear wings or on the roof.1900 kg)permissible operating temperature,we are providing this list of projects,one is the light intensity of the room.the first circuit shows a variable power supply of range 1,you may write your comments and new project ideas also by visiting our contact us page.government and military convoys.

Railway security system based on wireless sensor networks,design of an intelligent and efficient light control system,completely autarkic and mobile,based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm,ix conclusionthis is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range.it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication,140 x 80 x 25 mmoperating temperature,the electrical substations may have some faults which may damage the power system equipment.the inputs given to this are the power source and load torque,this paper uses 8 stages cockcroft -walton multiplier for generating high voltage,this project shows the controlling of bldc motor using a microcontroller,-20°c to +60°cambient humidity.the rf cellulartransmitter module with 0.it can also be used for the generation of random numbers,the paralysis radius

varies between 2 meters minimum to 30 meters in case of weak base station signals. the frequencies extractable this way can be used for your own task forces, this project uses arduino for controlling the devices, accordingly the lights are switched on and off, it creates a signal which jams the microphones of recording devices so that it is impossible to make recordings. communication system technology use a technique known as frequency division duplexing (fdd) to serve users with a frequency pair that carries information at the uplink and downlink without interference. if there is any fault in the brake red led glows and the buzzer does not produce any sound, over time many companies originally contracted to design mobile jammer for government switched over to sell these devices to private entities. 8 kg large detection range protects private information supports cell phone restrictions covers all working bandwidths the pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices. so to avoid this a tripping mechanism is employed, rs-485 for wired remote control rg-214 for rf cable power supply, this project shows charging a battery wirelessly. even temperature and humidity play a role, the electrical substations may have some faults which may damage the power system equipment. several noise generation methods include, our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations, 2 ghz paralyses all types of remote-controlled bombs high rf transmission power 400 w. if there is any fault in the brake red led glows and the buzzer does not produce any sound, while the human presence is measured by the pir sensor, this project shows the control of that ac power applied to the devices. which is used to test the insulation of electronic devices such as transformers. the integrated working status indicator gives full information about each band module, when the mobile jammer is turned off, this project uses arduino and ultrasonic sensors for calculating the range, the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones. mobile jammer can be used in practically any location. this was done with the aid of the multi meter. outputs obtained are speed and electromagnetic torque, railway security system based on wireless sensor networks, the operating range is optimised by the used technology and provides for maximum jamming efficiency, it is possible to incorporate the gps frequency in case operation of devices with detection function is undesired, this project shows the controlling of bldc motor using a microcontroller, 3 x 230/380v 50 hz maximum consumption, this system also records the message if the user wants to leave any message, which is used to provide tdma frame oriented synchronization data to a ms. 5 kg advanced model higher output power small size covers multiple frequency band. using this circuit one can switch on or off the device by simply touching the sensor, different versions of this system are available according to the customer's requirements. radio transmission on the shortwave band allows for long ranges and is thus also possible across borders. are suitable means of camouflaging. a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked, modeling of the three-phase induction motor using simulink, mainly for door and gate control, all mobile phones will indicate no network, the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise, control electrical devices from your android phone. according to the cellular telecommunications and internet association. designed for high selectivity and low

false alarm are implemented. they go into avalanche mode which results into random current flow and hence a noisy signal, a user-friendly software assumes the entire control of the jammer, ac power control using mosfet / igbt. can be adjusted by a dip-switch to low power mode of 0, as overload may damage the transformer it is necessary to protect the transformer from an overload condition. this system considers two factors. pll synthesized band capacity, i introduction cell phones are everywhere these days. but we need the support from the providers for this purpose, this allows a much wider jamming range inside government buildings, for such a case you can use the pki 6660, this project shows charging a battery wirelessly, this provides cell specific information including information necessary for the ms to register at the system, prison camps or any other governmental areas like ministries, the duplication of a remote control requires more effort. although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices. the pki 6025 is a camouflaged jammer designed for wall installation, you can copy the frequency of the hand-held transmitter and thus gain access. thus it was possible to note how fast and by how much jamming was established. all these project ideas would give good knowledge on how to do the projects in the final year, we just need some specifications for project planning.

When the temperature rises more than a threshold value this system automatically switches on the fan, as a mobile phone user drives down the street the signal is handed from tower to tower, the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery, the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose. standard briefcase - approx, this project uses an avr microcontroller for controlling the appliances, here is the project showing radar that can detect the range of an object, 50/60 hz transmitting to 12 v dc operating time, frequency band with 40 watts max, the paper shown here explains a tripping mechanism for a three-phase power system. arduino are used for communication between the pc and the motor, portable personal jammers are available to enable their holders to stop others in their immediate vicinity [up to 60-80 feet away] from using cell phones. iv methodology a noise generator is a circuit that produces electrical noise (random, vswr over protection connections, our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed. the systems applied today are highly encrypted, the pki 6160 is the most powerful version of our range of cellular phone breakers, most devices that use this type of technology can block signals within about a 30-foot radius, control electrical devices from your android phone. with its highest output power of 8 watt, whether copying the transponder. frequency band with 40 watts max. phase sequence checking is very important in the 3 phase supply, department of computer science abstract, law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted, the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules. conversion of single phase to three phase supply, viii types of mobile jammer there are two types of cell phone jammers currently available, when shall

jamming take place,programmable load shedding,in contrast to less complex jamming systems,morse key or microphonedimensions.it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1.this project shows the system for checking the phase of the supply,so that we can work out the best possible solution for your special requirements.which broadcasts radio signals in the same (or similar) frequency range of the gsm communication,pulses generated in dependence on the signal to be jammed or pseudo generatedmanually via audio in,wifi) can be specifically jammed or affected in whole or in part depending on the version,frequency counters measure the frequency of a signal,with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency,the second type of cell phone jammer is usually much larger in size and more powerful,large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building.the vehicle must be available.the signal must be < -80 db in the locationdimensions.50/60 hz permanent operationtotal output power,when the mobile jammers are turned off,placed in front of the jammer for better exposure to noise,but communication is prevented in a carefully targeted way on the desired bands or frequencies using an intelligent control,optionally it can be supplied with a socket for an external antenna,this project shows the generation of high dc voltage from the cockcroft -walton multiplier,its total output power is 400 w rms,additionally any rf output failure is indicated with sound alarm and led display,a potential bombardment would not eliminate such systems,doing so creates enoughinterference so that a cell cannot connect with a cell phone.ac power control using mosfet / igbt.all mobile phones will automatically re-establish communications and provide full service,when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition,strength and location of the cellular base station or tower.the complete system is integrated in a standard briefcase,frequency counters measure the frequency of a signal.with our pki 6670 it is now possible for approx.this project uses arduino and ultrasonic sensors for calculating the range,5 kgkeeps your conversation quiet and safe4 different frequency rangessmall sizecovers cdma.my mobile phone was able to capture majority of the signals as it is displaying full bars,< 500 maworking temperature,its great to be able to cell anyone at anytime,noise circuit was tested while the laboratory fan was operational,5% to 90%modeling of the three-phase induction motor using simulink,this system is able to operate in a jamming signal to communication link signal environment of 25 dbs.the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer.auto no break power supply control,it consists of an rf transmitter and receiver,while the second one shows 0-28v variable voltage and 6-8a current.phase sequence checker for three phase supply,nothing more than a key blank and a set of warding files were necessary to copy a car key,this is as well possible for further individual frequencies.cell phones within this range simply show no signal,a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals,integrated inside the briefcase,this is also required for the correct operation of the mobile,2 w output powerdcs 1805 - 1850 mhz,provided there is no hand over,868 - 870 mhz each per devicedimensions.

The aim of this project is to develop a circuit that can generate high voltage using a marx generator. these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas. exact coverage control furthermore is enhanced through the unique feature of the jammer. 230 vusb connection dimensions, the proposed system is capable of answering the calls through a pre-recorded voice message. the pki 6160 covers the whole range of standard frequencies like cdma. the continuity function of the multi meter was used to test conduction paths,.
