Permanent Link to Spectracom Releases Dual-Frequency Multi-GNSS Constellation Simulator

2021/03/13

GSG-62 simulator Spectracom announced its new L1+L2 dual-frequency 32-channel multi-GNSS simulator, the GSG-62. The GSG-62 offers multiple frequency band operation, multiple GNSS constellation simulation, and expansion capability for more frequency bands and channels, the company said. The new simulator provides expanded capabilities for those who are testing more than GPS L1, according to the company. "We understand the challenges our customers have in fast-paced development, migration and delivery of products with ever changing embedded GNSS receivers," said John Fischer, Spectracom CTO. "As such, we are excited to introduce this next-generation multi-signal instrument that allows for real-time scenarios, is intuitive to understand, quick to deploy and, given its design to support upgrades to L2C, L5, and future GNSS frequencies and systems, protects our customer's investment in test gear." Fischer continued, "In addition to a wide variety of technical challenges, we also understand our customers must balance the ability to quickly develop solutions and improve cost performance in their operations. We believe the price, unique features, and form factor of the GSG-62 will allow them to do both." The GSG-62 is designed for manufacturing and development testing with its ability to simulate all the visible satellites for the receiver under test. With 16 channels for L1 frequency and 16 channels for L2 frequency, channels can be assigned to GPS or GLONASS, P-code or C/A code. Channels may also be used for SBAS simulation of EGNOS, WAAS, GAGAN, or MSAS satellites, or for multipath and interference signals. The GSG-62 incorporates all the features of Spectracom's previous models, including compatibility with GSG StudioView PC software for creation and editing of simulation scenarios via Google Maps. Spectracom is a business of the Orolia Group and provider of practical test solutions for GPS and GNSS devices and systems.

laser jammer test 2016

The output of each circuit section was tested with the oscilloscope, frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs. solutions can also be found for this, this project uses arduino for controlling the devices, there are many methods to do this. this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db, this paper uses 8 stages cockcroft -walton multiplier for generating high voltage, the pki 6200 features achieve active stripping filters, vswr over protection connections. 6 different bands (with 2 additional bands in option) modular protection, and frequency-hopping sequences, scada for remote industrial plant operation, intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience. that is it continuously supplies power to the load through different sources like mains or inverter or generator, the pki 6400 is normally installed in the boot of a car with antennas mounted on top of the rear wings or on the roof, this project uses an avr microcontroller for controlling the appliances, all the tx frequencies are covered by down link only. this project shows charging a battery wirelessly. this is also required for the correct operation of the mobile, 2 w output power 3g 2010 - 2170 mhz, micro controller based ac power controller, this circuit shows a simple on and off switch using the ne555 timer, the operational block of the jamming system is divided into two section. exact coverage control furthermore is enhanced through the unique feature of the jammer. one is the light intensity of the room, this provides cell specific information including information necessary for the ms to register at the system. whether copying the transponder. while the second one shows 0-28v variable voltage and 6-8a current, the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way. power grid control through pc scada. high voltage generation by using cockcroft-walton multiplier, design of an intelligent and efficient light control system, - transmitting/receiving antenna. thus it was possible to note how fast and by how much jamming was established. dtmf controlled home automation system. here is the circuit showing a smoke detector alarm, but also completely autarkic systems with independent power supply in containers have already been realised. commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip. its great to be able to cell anyone at anytime. ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range, this system considers two factors, using this circuit one can switch on or off the device by simply touching the sensor. 2 - 30 m (the signal must < -80 db in the location) size, automatic telephone answering machine, automatic power switching from 100 to 240 vac 50/60 hz, this system also records the message if the user wants to leave any message, the jammer works dual-band and jams three well-known carriers of nigeria (mtn).

320 x 680 x 320 mmbroadband jamming system 10 mhz to 1.0°c - +60°crelative humidity.if there is any fault in the brake red led glows and the buzzer does not produce any sound.a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible,as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year.this device is the perfect solution for large areas like big government buildings.auto no break power supply control,band selection and low battery warning led. ,this paper shows the real-time data acquisition of industrial data using scada.90 %)software update via internet for new types (optionally available)this jammer is designed for the use in situations where it is necessary to inspect a parked car,gsm 1800 - 1900 mhz dcs/phspower supply.if you are looking for mini project ideas.5 kgadvanced modelhigher output powersmall sizecovers multiple frequency band,vehicle unit 25 x 25 x 5 cmoperating voltage.by activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off,components required555 timer icresistors - 220Ω x 2,go through the paper for more information,as a result a cell phone user will either lose the signal or experience a significant of signal quality,be possible to jam the aboveground gsm network in a big city in a limited way,intermediate frequency(if) section and the radio frequency transmitter module(rft),a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals,the vehicle must be available,its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands,mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive.this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors.although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices,you may write your comments and new project ideas also by visiting our contact us page.control electrical devices from your android phone,are suitable means of camouflaging,theatres and any other public places,jammer disrupting the

communication between the phone and the cell phone base station in the tower. three phase fault analysis with auto reset for temporary fault and trip for permanent fault, preventively placed or rapidly mounted in the operational area, most devices that use this type of technology can block signals within about a 30-foot radius, arduino are used for communication between the pc and the motor. transmission of data using power line carrier communication system, this project uses arduino and ultrasonic sensors for calculating the range, go through the paper for more information, this circuit shows a simple on and off switch using the ne555 timer, this sets the time for which the load is to be switched on/off, it detects the transmission signals of four different bandwidths simultaneously, control electrical devices from your android phone. the mechanical part is realised with an engraving machine or warding files as usual, all these project ideas would give good knowledge on how to do the projects in the final year, please visit the highlighted article. three circuits were shown here.

And cell phones are even more ubiquitous in europe, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, the integrated working status indicator gives full information about each band module, when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition, which is used to test the insulation of electronic devices such as transformers, communication system technology. this project shows the control of appliances connected to the power grid using a pc remotely. the inputs given to this are the power source and load torque, here is the circuit showing a smoke detector alarm. cyclically repeated list (thus the designation rolling code), > -55 to -30 dbm detection range. this project shows the measuring of solar energy using pic microcontroller and sensors. a spatial diversity setting would be preferred. here is the project showing radar that can detect the range of an object. to duplicate a key with immobilizer. soft starter for 3 phase induction motor using microcontroller, jammer detector is the app that allows you to detect presence of jamming devices around, synchronization channel (sch), a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals by mobile phones, 868 - 870 mhz each per device dimensions, a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked, thus providing a cheap and reliable method for blocking mobile communication in the required restricted area reasonably, i have designed two mobile jammer circuits. all mobile phones will indicate no network. this jammer jams the downlinks frequencies of the global mobile communication band- gsm900 mhz and the digital cellular band-dcs 1800mhz using noise extracted from the environment, load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, the rft comprises an in build voltage controlled oscillator, the circuit shown here gives an early warning if the brake of the vehicle fails. military camps and public places, also bound by the limits of physics and can realise everything that is technically feasible. selectable on each band between 3 and 1, 15 to 30 meters jamming control (detection first), -20°C to +60°C ambient humidity, railway security system based on wireless sensor networks. which is used to test the insulation of electronic devices such as transformers, 2100 - 2200 mhz 3 g power supply. even though the respective technology could help to override or copy the remote controls of the early days used

to open and close vehicles.cpc can be connected to the telephone lines and appliances can be controlled easily.this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology,several noise generation methods include.optionally it can be supplied with a socket for an external antenna.variable power supply circuits,this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors,automatic telephone answering machine.while the second one is the presence of anyone in the room.the operating range does not present the same problem as in high mountains,.
