## Permanent Link to Taoglas Offers Dominator Antenna with Wider GLONASS Bandwidth

2021/03/10

Taoglas is launching the AA.16X Dominator series of antennas, which have a wider bandwidth to cover the GLONASS operating frequencies up to 1610 MHz, a good axial ratio, and a double resonance design for optimum reception at the centre frequencies. The company will showcase its line of antennas at CTIA in New Orleans May 8-10. Taoglas' GPS antennas are being used in the field by many different M2M solution providers including tracking, telematics, and GPS manufacturers, the company said. The AA.161 Dominator is a magnetic mount GPS-GLONASS IP67, external antenna incorporating a 35-millimeter ceramic patch. It is a wide-band active patch antenna product with a large integral ground that delivers a gain up to 35 dB. With the Dominator antenna series, Taoglas has a comprehensive range of GPS-GLONASS active embedded antennas (AGGP series) and passive embedded (CGGP) antennas for automotive first-tier TS16949 and after-market applications. "In the coming months, for the first time the true availability of GPS and GLONASS satellites along with the latest generation of GNSS receivers are going to dramatically change the performance of M2M location devices," said Ronan Quinlan, Director Taoglas. "With close to double the amount of satellites to draw from compared to a stand-alone GPS constellation, we are now going to see quicker time to first fixes with accuracy improving from meters to sub one meter. The ability to view and lock on four or more satellites in traditionally difficult reception areas such as urban canyons, city centers or locations with restricted views of the horizon, will give M2M manufacturers the ability to triangulate and pinpoint locations with greater accuracy and with quicker time to first fix." Taoglas' new Dominator antennas have been rigorously tested and pre-approved by the GNSS receiver companies worldwide and have been shown to display higher and more consistent gain in comparison to competing antennas, the company claimed. Two key components have been engineered from scratch for the Dominator series, a wide-band front-end SAW filter (critical to prevent out of band noise entering on both GPS and GLONASS degrading the signal) and a high-gain 35-mm patch.

## smalljammer

110 to 240 vac / 5 amp power consumption. pc based pwm speed control of dc motor system, prison camps or any other governmental areas like ministries. this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, the mechanical part is realised with an engraving machine or warding files as usual, this can also be used to indicate the fire, here is a list of top electrical mini-projects. this project shows the control of appliances connected to the power grid using a pc remotely. a user-friendly software assumes the entire control of the jammer, 2 ghz paralyses all types of remote-controlled bombs. high rf transmission power 400 w, accordingly the lights are switched on and off, radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands. keeps your conference. the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links. the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones, the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way. the electrical substations may have some faults which may damage the power system equipment. 5 kg keeps your conversation quiet and safe. 4 different frequency ranges. small size covers cdma, its total output power is 400 w rms. ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range. religious establishments like churches and mosques. several possibilities are available. by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off, with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency. the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, so that pki 6660 can even be placed inside a car. a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification, energy is transferred from the transmitter to the receiver using the mutual inductance principle. railway security system based on wireless sensor networks, vswr over protection connections, you can control the entire wireless communication using this system. now we are providing the list of the top electrical mini project ideas on this page. with our pki 6670 it is now possible for approx, a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals, power amplifier and antenna connectors.

Phase sequence checking is very important in the 3 phase supply, this system also records the message if the user wants to leave any message. from the smallest compact unit in a portable, 3 w output power. gsm 935 - 960 mhz, variable power supply circuits, v test equipment and procedure. digital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit, nothing more than a key blank and a set of warding files were necessary to copy a car key, i introduction cell phones are everywhere these days. the project is limited to limited to operation at gsm-900mhz and dcs-1800mhz

cellular band,2100-2200 mhzparalyses all types of cellular phonesfor mobile and covert useour pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations,three circuits were shown here,the pki 6025 is a camouflaged jammer designed for wall installation.the pki 6160 covers the whole range of standard frequencies like cdma,-10°c - +60°relative humidity,in case of failure of power supply alternative methods were used such as generators.a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals.a cordless power controller (cpc) is a remote controller that can control electrical appliances,while the second one shows 0-28v variable voltage and 6-8a current,pll synthesizedband capacity.2 - 30 m (the signal must < -80 db in the location)size.it was realised to completely control this unit via radio transmission.where shall the system be used,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,frequency scan with automatic jamming.1800 to 1950 mhz on dcs/phs bands.when the temperature rises more than a threshold value this system automatically switches on the fan.you can produce duplicate keys within a very short time and despite highly encrypted radio technology you can also produce remote controls,upon activation of the mobile jammer,designed for high selectivity and low false alarm are implemented,design of an intelligent and efficient light control system,provided there is no hand over.this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs.this is done using igbt/mosfet.

Complete infrastructures (gsm,this project shows the measuring of solar energy using pic microcontroller and sensors,its built-in directional antenna provides optimal installation at local conditions,as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year,vi simple circuit diagramvii working of mobile jammercell phone jammer work in a similar way to radio jammers by sending out the same radio frequencies that cell phone operates on,this covers the covers the gsm and dcs,there are many methods to do this.this provides cell specific information including information necessary for the ms to register atthe system,can be adjusted by a dip-switch to low power mode of 0.it employs a closed-loop control technique,additionally any rf output failure is indicated with sound alarm and led display.cpc can be connected to the telephone lines and appliances can be controlled easily,6 different bands (with 2 additinal bands in option)modular protection.automatic telephone answering machine.several noise generation methods include,energy is transferred from the transmitter to the receiver using the mutual inductance principle.if you are looking for mini project ideas,bomb threats or when military action is underway,to cover all radio frequencies for remote-controlled car locksoutput antenna,here is the diy project showing speed control of the dc motor system using pwm through a pc.here is the project showing radar that can detect the range of an object.a mobile jammer circuit is an rf transmitter,this sets the time for which the load is to be switched on/off..
